

[00:00:23] However, we can start. We will visit you. Going from talking to meditation is the simplest in the representation of. Initiated by a gardener. To change that. That's why it's 89. Pfffff.

[00:01:09] He got information. Either because people are not capable of their beautiful story, of knowing a little more about the project, about the State and of course above all its sense of values. And so, it was also about seeing. Believing to have put into circulation a main market. Not always long before we can launch a message so that we can give the necessary qualifications to all the statements that have been made and that lead to the reputation of. The majority shareholder with. International. More important to know in this declaration, we will be able to do what is in French law. The first point is to represent. Amused by zeal and technique. I'm having trouble finding the second one. What about mining rights? NOT' is it not the Alcan company which is the company of the partnership to bind? Third, what is the state of play of the current situation and what has been projected in relation to the project for a draft agreement in order to stabilize the structure of the. The company had asked in 2016, the Internet had been put in place, was it not for the Domitia project or we had granted the Vidal company which will become a company of rights and a right for the companies which had obtained, is not it, from the Ministry of Portfolio and the real estate company that was born? Isn't it the old Livatag in 2010 which is reborn from its ashes and therefore which will be able to acquire a research permit after 65 years for life in order to be able to develop a short and long term project. There are a and as well as other substances. So this transfer occurs because of the first first transaction which will be able to do with the first. They will establish a partnership agreement. Our arguments for a mining right gentlemen's agreement and seven on the opening to fair trade, right? Now that I know, it hasn't been long before it's this second term. Peaceful society was not yet there. So there was an agreement between yes and he will run and for the creation of a company which will be called Passport and a partnership agreement with the presidency of John Legend. And this is not the first nor a new one. So at this point, at this point is going very well. After that, it's not really the truth. So don't wait for a hook by the zebra so you can help to technically and financially structure Manon's project. Note that until now, there were several speculators on the labor site. Several months ago, you were pushed into the destination phases and you can get started. And in this case, no one had managed to be able to attack the presence of a temporary team. Well, when

[00:05:29] the site was approached, given the following conditions. First, he had to adhere to the partnership agreement in the Belgian Union and I remind you again, a pleasure has never existed in Belgium. So he adheres to this partnership agreement and he will acquire 60% of the shares of the women who will become the company. Latour is nothing that separates his shares from his shares. At the time it was a company in Spain and we will ask it to be able to produce a feasibility study for 36 months,

[00:06:10] not only to produce a feasibility study within 36 months, but it was also necessary to raise funds on the international market. This feasibility study, according to the agreements, is that it had to be admissible not only with its members, but it had to be a satisfactory study, in the words of the real estate company if and only if the rate of return was 20% . And fourth position, it is not only in very good condition. It was therefore necessary for the structure that had been put in place to be able to bring the project as quickly as possible towards the Super thirteen 350 transformation. So, we are in front of an exploration permit which has a duration of five

[00:07:04] years and therefore in three years which is in five years. Well, the company may have succeeded in being able to establish a world-class feasibility study. Why World Class? Moreover, it is called the lesson. We are told that the Devils, for those who are in the film, they know that this produces orange peel skin. This is the greatest hope for this project. And as we saw then one of the

biggest projects of the documentary on the beauty deposited then at the time of the discotheque with the fishes, there was always concentrated on the pubs. That's not it. And we had to put in substantial resources with such a drill to be able to fully move the rock and therefore give an assessment in substance. L' hope of long-term discovery was so great that the first thing that was done was to stay with the PS, not His Excellency Mr. President. This unique information and this had been made and a promise had been made that the company would be able when the work to be restored with regard to the research work to be able to come back to His Excellency Mr. President to present to us what is the first results? And so now let's get back to the planning issues. Both have complained that society has abused its power and therefore this abuse of the majority has held society together, which is not the case. Remember, we insisted here and the number of hundreds of documents was in the public domain, so that can be accessed by journalists. So that number and it was anticipated that there would be three representatives of the company to ask at the board level and at the executive level. You also have two representatives of the Real Estate Company and independent of the company of Antoinette. So it was done to intervene, anonymously in some cases, as being a representative whoever is on several occasions in the meeting of the board of directors combined with the Assembly. Pierre and Jean-Yves. They sit regularly with the president Laurent on the board of directors and also you have the representation in Spain of the English company which received a mandate from therefore to manage the current situation of the company with a strict application. NOT! Isn't such a provision provided for in the news? In the management as it is of implementation and well of implementation of the space, no chance of being able to manage the project for the future. Doesn't this meet the conditions that were submitted to them at the presentation of the news? Does the TF? Because the feasibility study was submitted within 36 months? Yes, the feasibility study was submitted on time, easily. Was the feasibility study sent to the mining company? Yes, in April, when the company arrived at the result and hopeful conclusions of a feasibility study around the month. Is not it Doesn't this meet the conditions that were submitted to them at the presentation of the news? Does the TF? Because the feasibility study was submitted within 36 months? Yes, the feasibility study was submitted on time, easily. Was the feasibility study sent to the mining company? Yes, in April, when the company arrived at the result and hopeful conclusions of a feasibility study around the month. Is not it Doesn't this meet the conditions that were submitted to them at the presentation of the news? Does the TF? Because the feasibility study was submitted within 36 months? Yes, the feasibility study was submitted on time, easily. Was the feasibility study sent to the mining company? Yes, in April, when the company arrived at the result and hopeful conclusions of a feasibility study around the month. Is not it in April, when the company arrived at the outcome and hopeful conclusions of a feasibility study around the month. Is not it in April, when the company arrived at the outcome and hopeful conclusions of a feasibility study around the month. Is not it

[00:10:51] somewhat exactly the feasibility study sent to the real estate company? And we've seen the reactions that more than eight months later and even the reactions that are coming in today, that every other person partner doing a debate on the feasibility study. On the contrary, the presence of the feasibility study soon generated conflict, but even made it possible to embark on this project. And so, for the record, the company

[00:11:27] Taton will hold on. Who is part, who was part of this partnership? Well the company to become had been paid at the time in 42 in terms of shares for more than 240 million shares in the company. Actually. These are common practices. Isn't it in mining? And so you have other examples of the fact

[00:11:56] feasibility studies? We were explained what is done after reentering the shareholding is also part of their rock level mineral study. So all these companies

[00:12:10] under the tutelage of. And then there are these conflicts there are actually mine. Isn't this shareholder to the company of what is possible to return? At the level of the prostate. If we are family or associates, they are the shareholders. They are the ones who made decisions on one of the resolutions that is under satisfactory feasibility study to do the feasibility study for this credit. The information collected by the Miles administration for those who are admitted and have the expertise of 1500 points, you can't, can you, send samples outside without giving the amount of the samples to administration? So the charge of holding a geology department contributed to this most important level. We have hired a property geologist so that we can participate in all drilling activities. I hope it will position itself on the site and therefore this agency of geologists was indeed present. Isn't it up to Charles to say that we can rely on samples, on transport, et cetera And so also, you must know that the most important part in terms of satisfaction is that the first should be interested in relation to the partnership agreement. This is tomorrow's rate of return of 20%. However, the rate of return has been multiplied by two and therefore it is 30% in the feasibility study and therefore internationally for those who are insiders. They realized that this feasibility study in just two stages revealed that the DRC had the largest deposit of lithium. Phenomenon afterwards. But it is not the most common in the world and the second after that of Australia. And so, we found ourselves at the end of our career, up to 200 years and for which today there is, isn't there, only this set of telecommunications that you have seen through the media and you now understand a little more why we got here. And so, you are going to reassure him to take stock of the feasibility studies of this report which was made on the feasibility study, does not come from the international community, nor from experts in the government, but in addition from the sponsors and other partners. It is a project that is not complicated. It means that we pass on the deposit, on technical questions, but these are the exit door. And the fact that it's a billing, it's by the calculations, isn't it? Regarding the different market in this kind of work, its precedent which is still well known, there is an international association of engineers and water which brought out the information, in this case concerning a project. This information is simply made public. And so, when we go now to the other issues relevant to the license, it was conveyed and it followed the statement of the two people. We have indicated that the state and company date. So it is necessary to specify because in the language of that it has been used by many, many have said that the one who modified the current one, the current operating permit, is the company. Basically, that's not, it's not communicated. This is not wood, this is disinformation. The pharmaceutical company is the majority shareholder. The paralyzed society has no mines. The mine is considered by the company of Acre in the contract, is not an Australian company. Many people passed on the message. It is a company under Congolese law which comes from the export partnership of the company Nature Libre to intervene to create the Katangese crossings. It's not an Australian company, it's a company that signed up correctly on application day. These two parties to the commercial court would have information on the platform. And if it had been, isn't it not to turn back? And so the bill, then there, it is the bill which is the company of the partnership. So it's not up to the person who was going to present a feasibility study on a case-by-case basis. So why am I wrong? But his name, isn't it on this study. One. It brings back a leg to the school which asked him to be able to present his studies in three six months. Of them. Since 2002, the intelligence of the Congolese legislator had introduced the notion of affiliated companies into land law. Affiliates. You go to article 46 of the mining code on the grounds that mining companies are the ones that have more than 50% control at the project level. And so these companies,

[00:18:11] to say that this is what is brewing is that a few years ago, isn't it on the stock market? And so speaking for subject, isn't it other projects and its subsidiaries? But there, you have subsidiary companies of project companies which are to facilitate the bonus, and so on for us. It is an affiliated company under our own legislation. So there is a misinterpretation. Is there a company as date? Does she have to

[00:18:45] to socialize? Does she have the obligation to say here, I will be able to develop, etc. A company, right, who should and who owns shares by exploiting the exploitation? We are the, isn't it the license? But it can take actions that are called social responsibility of companies not members. A It's societal, that's what is provided for in the mining code. That's to say? Its board of directors may decide to make useful offers. Is it only 21 years after doing what? For those who do not know how to help a city and a mined territory, there were weapons, several divisions across the territory and no one could move freely, time to remember the made in Germany which has enemies even for the territory . And in modern times it was called the triangle of death. So we removed and several other activities that were done, which are in particular on the commune and other activities. So it's not that we are today since we have, we left Europe, it's not, we've already gone under the chains to say that here the company is 27 years old issued the research permit and that this company has done nothing for the people. France it's really shameful, scandalous all that because we have laws and the research license of the companies at the origin of five years and during five years manages to present 33 feasibility studies. May 4, 2000 other activities. So it's not that we are today since we have, we left Europe, it's not, we've already gone under the chains to say that here the company is 27 years old issued the research permit and that this company has done nothing for the people. France it's really shameful, scandalous all that because we have laws and the research license of the companies at the origin of five years and during five years manages to present 33 feasibility studies. May 4, 2000

[00:20:30] 21, he submitted this feasibility study to the mining cadastre. The real estate company having received the feasibility study in August, after more than eight months without reaction. This is why today we see reactions that are more about figures or invoices. In a company holding a research permit in the Democratic Republic of Congo, the objective is to be able to carry out drilling work to ask whether this project is viable or not? Because it is a bit for us precisely a situation where it is not good. And in this case, it was done. Was this project economically viable for the time that was done and there before the end?

[00:21:21] Isn't that 53 years old? I still remember study of the loans had been submitted and several reports of the board of directors for that, it will also be necessary to see with Courrières, supporting evidence, is a question of demonstrating that there was a charge. But that's not all. Isn't it to be able to say that in 48 months, you have made no reaction? The only condition that is originally provided is that the feasibility study of Areva a rate of return of 20%. You need to raise funds. Or are we an example? For me, it's a request, an abstraction from being able to explain that because we love it. Is not it? On the stock market, phones are sold in Asia, but not a speculative company has managed to avoid today to date, the only company that has done, isn't it, investing by demonstrating the economic value of valuable projects? Today we are talking about this project. It is because precisely favored by the rules of hundreds of millions of dollars. Or why extirpate, isn't it, from the basement the useful information to share the first accommodation there with his Excellency the President of the Republic and later with a hope, all the other authorities who are involved in the defence. So today, we find ourselves with people who have dared to give as if it were a principle. Again, I emphasize the company that owns the license is like parting with mineral rights

with questions about the partnership. More importantly, it is that in the file both at the level of the mining cadastre, the cadastre, there is a service specialized in the stated objective which received, a year ago, at the center of Spa, the various information towards the various specialized services . And a studies have been done and so therefore. Therefore, the environmental issues were addressed to me and a favorable opinion on the environmental impact studies and the environmental management plan. All these studies received a favorable opinion. Besides that, there is nothing favorable compared to cadastral reconfiguration, is there? Third, and most important, is for mine management to reassess the feasibility study. And there are fifteen experts who sit down to be able to demonstrate that it complies with the diagrams given in the mining code on the presentation of feasibility studies. They gave a positive notice of compliance which sent a letter to the mine management which implied a favorable technical price or a favorable opinion. While for Apple, ours. For 2002, the owner recalls that the DRC is opening its doors to investors and the Prince His Excellency Mr. President has done a lot of work upstream to attract investors. He has that quality that came. It is recalled that we come to give in in the mining sector on the basis of the principle according to the first which comes, it is the first which is served. It is not about the size, nor the height, nor the color, nor They gave a positive notice of compliance which sent a letter to the mine management which implied a favorable technical price or a favorable opinion. While for Apple, ours. For 2002, the owner recalls that the DRC is opening its doors to investors and the Prince His Excellency Mr. President has done a lot of work upstream to attract investors. He has that quality that came. It is recalled that we come to give in in the mining sector on the basis of the principle according to the first which comes, it is the first which is served. It's not about the size, or the height, or the color, or They gave a positive notice of compliance which sent a letter to the mine management which implied a favorable technical price or a favorable opinion. While for Apple, ours. For 2002, the owner recalls that the DRC is opening its doors to investors and the Prince His Excellency Mr. President has done a lot of work upstream to attract investors. He has that quality that came. It is recalled that we come to give in in the mining sector on the basis of the principle according to the first which comes, it is the first which is served. It is not about the size, nor the height, nor the color, nor the owner recalls that the DRC is opening its doors to investors and the Prince His Excellency the President has done a lot of work upstream to attract investors. He has that quality that came. It is recalled that we come to give in in the mining sector on the basis of the principle according to the first which comes, it is the first which is served. It's not about the size, or the height, or the color, or the owner recalls that the DRC is opening its doors to investors and the Prince His Excellency the President has done a lot of work upstream to attract investors. He has that quality that came. It is recalled that we come to give in in the mining sector on the basis of the principle according to the first which comes, it is the first which is served. It's not about the size, or the height, or the color, or

[00:25:16] of its origin. But that's, that's the principle we have. Who's the problem, isn't it done by article 30 right now? According to the first who comes, he dares at the end of the search to go in order to be able to make explorations. It costs money and it is a risk. We even have \$100 million, but nothing concrete. But if you

[00:25:38] get lucky and let it happen by the situation, we arrived. Well, we were the first to be able to say that on the Panama site, we have one of the largest deposits in the world and therefore we were the first to be able. So the second important principle is that your country's mining code has decided. Isn't this the mining code, the

[00:26:03] discretionary power according to the territories? This is where we can give you a business license the business license. Decisions are already taken at the level of article seven 22 of the mining code. We are told these are acts of the six months, that is to say those who draw. Who are you? By taking up the technical matter which is

[00:26:25] given by the mines department. But during the 2009 elections, which 50 rooms therefore began, you have 20 days for a cadastral opinion and the favorable opinion had been given. You then have at best 60 days. Between the management of the mines and isn't it the team of fifteen? The team of fifteen within 60 days to 50 days.

[00:26:49] To be able to evaluate a technical feasibility study and give a notice of compliance. It sends this notice of conformity to the direction of mines, the direction of mines, within ten days in power during the favorable or unfavorable technical visit. Besides, you have 180 days a year, right? Two specialized services on environmental issues. This is not dependent on the Ministry of the Environment and the Ministry of Mines and will take a decision. Is it favourable? What is not favorable? And in this case, the three decisions have arrived and the account is not there, says article 71 that Minister Dominique de Villepin makes the decision. He just notes the existence, the hope and the observation of the existence of these opinions, decisions that have already been made. Therefore, we note the existence of these notices. And it's either if by misfortune and the kick of the minister's child, the decision-making against these three decisions, we have a ticket of which you have the possibility and why of merry-go-round or by a decision to give your all. That, that, is the law on technology that has been put in place. It has been fully respected and the technical, cadastral and environmental opinions have arrived. But this not favorable. And so the minister has no other choice. Isn't that making a decision to be able to zoning? Note that we spent days and days at the time of celebrating well. Remember that was the first license for whom? The DRC lithium license. What happened went to Zimbabwe? We have the IP addresses of the investigators. When Zimbabwe learned that the DRC was going to set up one of the biggest fields, they probed this little unicorn project. They followed the president. He made a decision and they came up with what we've come up with here, including projects in a special economic zone. They have been deceived. Long live the mine. They concluded. They won. They integrated it into a special economic zone and they gave, didn't they, taxation? Why? Because the cause was who was going to be the first to get the license and have a sustaining industry. And when you go global and exponential demand, the only misfortune of perpetual sports is being a separate company and putting all the audience in it. You understand that someone can misuse this information? But as far as all the mechanics of respecting the system are concerned, it has been respected. While we do not share that such has reacted in a meeting or not in the observation that is imposed on you. Abuse your position, do not oppose the direction of BCC as JP would say. We don't have the money. You come with the money and the publicity when we have a study of the programs and more feasibility. OK. After the words, the money on Friday, we have \$500 million available today for the first phase of mine construction. 24 months of construction. We need the processing unit. We need space in Pyramid Central. We even did more. We also have a glass of water to do continuously. Why can't we innovate since we come to age 60 eleven from the mining code? We are even asked for a firm commitment to demonstrate that we are going to do local processing.

[00:30:36] We said we can do better. Why can't you grant us the possibility of making a public-private partnership on this project? This Parliament will be divided in this way. We do what is called a public-private partnership,

[00:30:52] an unsolicited offer. We come to the government with two offers, one financial and the other technical. The other technique is to sell. You give us, through a collaboration agreement, the opportunity to be able to develop infrastructures that are lacking. Isn't that exciting in relation to this project? For kids. I talked about who you seem to have the night, we live them, etc. There are uncertainties, there are roads, etc. But for the moment, there is nothing. So if we only put the said project, there will be so much pressure and difficulties because it is a disadvantaged region. We come to the government, we submit, it's the Prime Minister, we see there an expense because

there, we. The competence of this question is not synonymous, but not necessary, from the wallet. It is the government, therefore it is the Republic. And at the same time, both show evidence in support of deposited US funds. This is our strength. Rehabilitation of Manono airport, an international airport. Rehabilitation of the railway of a section of railway. Road rehabilitation. Isn't it that 20 Minutes does not want to date because we found that in order to be able to release mineral substances, we had to be able to go through hospitals? Rehabilitation with some work at the moment. Isn't it to appeal to all the other activities in order to be able to integrate them into the establishment of a special economic zone? We feel like an exceptionally special service will become the key since in the Council of Ministers, the five decisions, if I am not mistaken, 36 or 46, the Prefect had been reminded to use his special acronym for the fold and the development tickets . And so, we said to ourselves, let's create a special economic zone, you have the list and next to the city, you have the special economic zone which will integrate all the activities. So if we put a foundation X instead of zero 3%, isn't that not applied in the specifications? We would impose a figure, we imposed on each company that is found. And given the enthusiasm, the people of the zone and all the activities that we had planned by saying we have 1000 companies which are in this special economic zone with advantageous conditions for these companies there. Because we need to be able to trigger the trigger. But no development that we are reassured I think. But since all these small companies etc etc having contracts of activities with the company BATA and therefore if you make a 24.0 per year, you pay 1 million dollars. We made \$1 million paid \$500,000. Here is your return to the community of Manaus and this money will be used to be able to develop for it. Based on the experience of other projects, we can make millions and millions of dollars available to this community and develop in a completely, for Because we need to be able to trigger the trigger. But no development that we are reassured I think. But since all these small companies etc etc having contracts of activities with the company BATA and therefore if you make a 24.0 per year, you pay 1 million dollars. We made \$1 million paid \$500,000. Here is your return to the community of Manaus and this money will be used to be able to develop for it. Based on the experience of other projects, we can make millions and millions of dollars available to this community and develop in a completely, for

[00:34:21] first time, right

[00:34:23] activities of the social genre, et cetera That's what had been, but it's not the same process. Is this not the work of a research permit holder? It was submitted to the government. The part of the financial offer that is financial was that we had started in Panama. Should the group enter for the first time for a company, for the government to come or join the Stock Exchange, the Stock Exchange, right Australia? It is not a speculator who has just started here and that has never been done in the DRC or in business. Sit down with you and the offer that was made was, right, a sum of money over \$166 million? And we laughed at the Congolese State also otherwise than by the

obligation in the company of the crown and therefore it is necessary to take this 10%. Third, there is the development of processing units. We have an appointment for the first time. Instead of waiting, we want to pay. Aren't these processing units? And at the time, already around 2021, we will be able to sit down, isn't it with the company which makes it one of the subsidiary companies of the capitalist society for development? Isn't that part of the value chain? I can tell you that nobody, at that time, didn't even know what you were talking about. There is evidence, we have been asked to do this, the Minister of Industry told us. We have organized workshops. So it's not something we're going to attach already to show minutes of workshop. We sat down with the Ministry of Industry to help with the development of if we want to put processing units for those who do not seem to be, we are at the base of the forum on the pasta value chain. We followed one and when we met one of our Congolese brothers who is our doctor and specialist in medical products, it was a brilliant idea. We are going to listen to what we are going to, and so on And we are going to push the government. Then comes the Ministry of Industry, which will later seize the government. A forum will be organized on the value chain and share documents, exchange with him, exchanges with all sectors. I think we wanted to, they only listened very little and therefore saw the world at the same time. NOT' is this not from this forum? The president reminded the president, isn't it in the Primature, in Parliament, to be able to appoint Aristide as a member of the committee?

[00:37:13] national on the value chain? This document is a perfect illustration, a set with a State, with several organizations in this committee and this will of the country, the follow-up committee of this event. And so, you have in that vision there another financial day. As I said a little upward more or less in value of 167 million dollars which exceeds by far. By the way, when you hear here and there what has been proposed for the entry of certain societies into society. But for the first time, did I keep myself in good shape? Congolese, for the first time made narrative holes in the public sector. So they want the Congolese state

[00:38:03] be represented and sit at the table. At the same table, decision on the fluctuation of the markets which put the intelligence that it takes an invention of technologies. To be able to make parties, you need decision-makers. There are brilliant people, financial engineers who can advise the State at this level to unlock all our business at the same table and therefore decide on this State market and think of the children who have gone further below of us to understand this length. To do a study, Google did a study on the best destination to be able to do the value chain of a country. Well in this study, the DRC was shown to be safe compared to all countries on a set of things. And so this study was presented at the forum. So it is still the DRC an invisible destination for those who know the diplomas, it is a design contract. If you're not well, they tell you I'm the owner. I don't have the means and I don't have the technical skills that I would like to develop. It came on a first-come, first-served basis. It is that in the mining code and we do not take an example from the man at the origin of the country, the principle which is applied for the latest in article 34, it is It came on a first-come, first-served basis. It is that in the mining code and we do not take an example from the man at the origin of the country, the principle which is applied for the latest in article 34, it is It came on a first-come, first-served basis. It is that in the mining code and we do not take an example from the man at the origin of the country, the principle which is applied for the latest in article 34, it is

[00:39:30] it's the first comer. So it's a fresh one. We are coming on an investment adventure that can work but cannot. But when it works, elected officials talk about development. I am bad because I asked that this project, it is presented, that I want to associate and that my support. Long before all these discussions, there is

[00:39:54] supporting evidence. These statements, if they were submitted to power. So. Finally, this financial envelope, another more important technique, is involved. But infrastructure development,

we, I remember. Another way for the other is the Casamance plant and so later, I will come to that. At the beginning, an update on the situation in Darfur,

[00:40:23] today we are in the feasibility study. Had been presented the opinions of citizens facing this time, she said the opinions of the six, a favorable environmental opinion, favorable opinion, technical disaster, arid compliance opinion. The Minister has the obligation to apply section 75 and therefore we find ourselves today only in terms of operating permits, which permit does not allow us to be able. So another condition of the partnership was met \$500 million available to start the project, \$500 million. Is this a story we tell? I see that my little story is that when we were able to table all these offers, the government, at one point, had a question is what by them silver? Do you have funding to be able to start the project? He will appoint experts. We have documented it. He is going to give us a delegation which is both a financial account of the State with this institution involved in the project with whom they spoke, who takes out the mule? They submitted the report to me for voting. We will give our favorable opinion. We heard, we did things. They have the means to be able to develop the project and therefore it was supported. Your project is stuck in your environment for whatever reasons you can imagine. Then the money is available. We had that in the North, in a situation as pointed out with a specialized service, but which does not have the right to be able to issue an opinion in such a way. Identify in shine. One. In a single day. John Williams ended his career exhausted in this category. Isn't this the shadow of the project and insisted on the intelligence of its provisions? We are not going to say that we are on a given day. We, one name last five days, think they have time to design the album company and live and listen. But what happened? No one is giving us the information, but we have seen in the media an acceptable operating license of the world with a documentary focus to say no. We take the time to calculate the superficial duties because indeed, as you know, in the other sectors, the minister speaks the decision. It is already in the legal promise. But here, exceptionally, intelligence is the way to produce at all costs, given the mechanism of superficial law. And why did John Williams and the others reinstate the superficial law that he had imagined the law, which is to say that we are facing, not a country indexed on corruption. We are going to give the means to trade and therefore in the implementation of overlay rights to banks, which has enough to do without the two directly. But we can assimilate and the boss underline, work on files for France and therefore in addition we have unfortunately. That doesn't excuse a man who charged and did everything for disarray. They fought and they recovered for their part at 50%, 50% of general. Otherwise it wasn't enough. It was therefore exceptionally that the legislator had proposed to give him the possibility that when the minister's decision is taken, it is not notified directly to the holders of mining titles. We send him a unique Louis II

[00:44:16] two years. One. He calculates the pro rata temporis, ie the time remaining to run, because the calculation of rights over the year is that of the year. But if it is yes, less, effectively, we calculate on a pro rata basis, in other words to the company and the company has a period of fifteen days to be able to pay. But he also has a significant deadline for a state of affairs not only to pay the superficial weight, but he has to give 10% per annum miscellaneous to the state. That's why we gave him not to make a decision after the fact. Questioning the decision that was made by the cadastre and unfortunately underlined is a public event on the right of reserve in the space of public officials such as the course of conducting public money in the DRC and it issued opinions in public remind us of the beginning since 2021, we have a new transparency law that protects personal data. The feasibility study is personal data to the data company. Therefore, everywhere in the public square, bases, above all specialized services including article eleven and the decree which creates complete data by limiting the possibility of passing

[00:45:36] more than five days without any intervention. And we wrote in our columns we

[00:45:44] calculated the superficial rights we expect and reacted small. Communicate them if we paid because we have the time feeling of the Ministry of the Portfolio. So the next question is do you intend to transfer the 10% to the Congolese state by saying We are unable to because we are waiting to be identified by capacity, so the law does not give the possibility. Oh dear, it's just us! Why am I telling you that simple? And so, what will happen in the meantime? It will happen that unfortunately this implies. I will take the train to go to Mali. \$1 million in losses a day. Do a little math we are at 69,960, or 160 days. This thing is over \$60 million. And who pays the company in which there are the following shareholders? So the State which must return? You have a trial for five years and they lose. It is the shareholders who lose. So it's not just to make a little time, it's the country that is losing. But think, in addition to those thousands of jobs that should already be

[00:47:05] paid, those thousands of jobs that's already started. Think of the boomerang effect of the various activities on the territory tomorrow. But also think about the effect of the special economic zone which was in fact the element that we wanted to use to attract other pharmaceutical investors, others, and so on. we pushed the cork further. The Minister of Industry will no longer help us to support us, and so on. And so today, the Congolese state is as important as that. Over \$300,000 a day. This is the consequence of this decision. But do we. We are not against, we can appeal, but this processing to the Platform company, which is in fact a partnership company. VS' is like I'm sitting somewhere, but I'm there under the direction and this is the first license. People came without going through mainland television and no longer the Internet. Here we are talking about the interests of the people, images and images. Isn't it from the project? That's the point. Isn't it about Africa to speak of good? We forget, don't we? So we are now telling you that it is a president who has done so that the UN can have the vital minimum, it is society. Three. So it's a pure loss isn't it? We can by by. As we are wasting our time, I speak every minute that passes. We are losing money on this continent. So the situation is so dramatic that it is when we are a country of exploitation that we have the obligation to negotiate specifications. Six months later, isn't it the release of the Tamtam license for the Whites? Even if there are activities of a social nature which are not those mentioned in the framework of the charge, not without preventing how we are going to be able to do, how we are going to be able to take charge, how we can develop more financially less demanding in quality. We are sending out a very bad message in terms of the business climate for the DRC when the president is not traveling at all, and so on And so there are difficulties in the debates between the shareholders who do not touch on the first . And you have many examples or even the situation to be done, but the law presents us with the project and that of other projects. But we still have discussions that are going to come to an agreement in the coming days. So you have to separate things. But let's get back to those two points and I'll be able to end it there. It is that today, between, it is concept of financing which

[00:50:01] is available for identification. Today you have the power of the council. You have work on the railroad to be started. Spend the money to stop the financial fire that will turn in the fields. For those who haven't experienced it, take the discovery train. How are you going to develop the region? And further, while we fight. And I remember the professor who said that there, we were cursed for amenities because we have large deposits. And now we are in power. Zimbabwe, Paris, Chile, Argentina, Europe, everyone is in the process of being able to move. And today, we are creating legislation. I don't know if you followed up on campaign issues. So we don't want any more vehicles? NOT' isn't that who doesn't use diesel? Et cetera therefore electric, therefore the market. Become bigger and take society into account. There is a reason to go see with us a big market. We are told to ride. Who dared to propose for the first time to the Congolese State to enter the shareholding? So we tell him to ride in towns. We want to do processing rather than, as we were going to do, we need electricity. We say no. The money is available to rehabilitate the plant, of course. And the problem begins. We tell you money and since we are for development, there it is in structural unemployment. On the other hand, without knowing the opportunity, is it not, once we

have questions to ask, it would be an investigation or an investment bank. And so, as we know it now, we. The conflict is not just for profit, but not for what. It was released for one reason or another. It was precisely to be able to prevent. This is.

[00:51:58] The dispute started exactly when the company released a feasibility study. Let's all agree that no one is complaining about the context of this feasibility study and the was done. Isn't this the project on the DRC and in a world in which the company in principle has agreed to be able to buy shares from the shareholder at all costs?

[00:52:29] Well after going through all the Dutch deals that were done through the company when he was basically we didn't see it either. So we estimate everything else that met. The event is simple, we want to see it because it's a lot of money. But the reasoning of society, based on the amount, needs everyone. You are a shareholder and owner of 240.42 million shares. A type of event when parties stood in a transaction. We will pay, promised during this trial must face arrests to go there. There was no payment, no \$6 billion spent in the country. These millions of dollars do not have what to pay cash. The terms of the contract have been respected. So on this question, it's just a matter of price. For the rest, we can lie, but no, nothing, at least that. The victims. You are all, aren't you, the best designers? Very during the investigations. In a company to be able to access shares, there are two mechanisms. There are societies which, at the same time, you have parts which are unstable. So when you are, you will see the statutes of the provident society takes a right of preemption. But the right of first refusal was not the following two conditions. You don't, or even immediately. I intend to sell my shares. No, it was at the beginning of 2019 2019 that the visiting company had seized mail or being able to acquire the oldest in order to fulfill the obligation, that of having done and which consists in lifting as much as possible from less good health. We did not build only in Nîmes. We are going to the. And for this common project, there were only the reports that exist. So he sends a message for us we'll see. We have words, names. We are looking forward to it. Remember Yannick Noah you have a general meeting and in that goes through other ways. You authorized

[00:55:10] to elected officials to discuss with the Ministry of Portfolio to see how it hopes to be able to acquire its shares and what mechanisms to put forward. Well, when it's been done, that's how you should do it. You should not just send a letter, but a list of ten. You must send the written offer. Isn't it the fault of the victims or the opposition to see how your part is doing? But in the meantime, remember those who want evidence, we can turn it. We had already submitted a financial offer of more than \$60 or \$66 million to the government. So that implies an IPO of \$165 million. Then into the lithium processing companies, and then into the stock company. The finances are there, we make a calculation. Do you see the debate? Not only do we enter into this procedure, even in the development company of the special economic zone, but in fact, with the government, it was the lethal weapon, an important one to be able to develop and therefore it is still the same. All the decisions had been taken even before the respect, wasn't it of the right of pre-emption? The letter was just a formality since the letter but was never accompanied. Isn't that two pages at the technical offer stage? And this letter was sent to who spoke made this statement who is the shareholder? So they will find each other and they will take advantage of it to make it an important one. Ask yourself the question, but this question may have passed to the Council of Ministers. There are two people who gave us more prizes in their presentation. Isn't it a heartbreak to which there had been an additional session of 5% in favor of a parent company, even though I voted at the level of the general meeting of the company. There is no information in this direction. This person who informs us that today, since even if she had said herself, even if it was the company which at the time was on the site and the government had taken the decision that she had not respected the terms condition of the implementation of this project and therefore based on the law of 2002 which imposed that one can make the license for two conditions. First condition, is it not, it is the number of elements of superficial rights. Second condition, it is the non beginning of the pronouncement of the established

law and the government had made a decision. They went to arbitration and I don't know by what mechanism. Moreover, some have said that here, there was an adage it is not because she managed to break the she will be able. Isn't it in people's minds to resort for the purpose of an assignment to a company where the government wants to invest and we take it from the streets, not through the statutory bodies. So it's a bit in the genes and we understand better why. Who was it from? Because even we who are in this partner are not aware. So our problem is our approach over time. If you wanted to make a written offer that had been conducted by the company and had no contract. VS' is because we had a right acquired since 2009, the general assembly of public which had authorized us to be able to seize the ministry of the Portfolio which had never canceled to date. And so it's an acquired right based on that right. We went to make an unsolicited offer to the government, much more important and interesting for the country. It's not a speculative society that creates these people. Others got auctioned with us on the Stock Exchange. Let's make local transformation support a development of territory whose tendency is to employ active people. We are in northern central Africa. Imagine all the opportunities. The geographical positioning of the behemoths of the other development. You have Zambia and Burundi, you have Tanzania. And more importantly, he is not a myth. We wanted to approach people to say and we are going to rehabilitate the railway line which includes VNF. As a border recovers the ports, we put the swimming pool and the factory on the other side, in the rocket. It's not the speculators who are already paying to insulate the night world. Many Germans are expected. We want to convince the government to inform, to be transparent all the same. And people have been coming here for a while, not for the media program, but for reading records that have significant economic value. And if we transform the controls engineering, we will strengthen the market and be at the heart of the debates. We will go with Air France to the same post and we will be able to in March. It is difficult to decide. So that's 86,000 tonnes of programs. This is the truth, as Plato said. He reminds it very often, doesn't he, Socrates? Says Plato? It's my friend. But the reality of the facts is even more that of the discipline, because it is the truth. What we must surpass ourselves as Congolese to support a project. The only thing they do is that there is at least is the development of the project. Build for 24 months and see central once in a while. To be to develop and allow sports to thousands, to thousands of Congolese to be able to have access to the residence, to be able to have access, is not it? So here are the clarifications to make and to. I don't know if there is. The other speakers have something to add, in particular. There, then we'll take the step. So we're going to go to the questions and answers stage, so exchange members with you on the question as you have it. And we are going to take a series of five questions each time afterwards to answer these questions and take a series of five questions. First of all. Before speaking. The question. Thank you Mr Weiss who goes to. A few days away from the action compared to what had. OK, thanks. But already we thank you for having answered. The supreme body then launches to deny the problematic questions quickly. We will wait. Good. Hello everyone. I have two questions. Internet users who have not followed Abdel. Disagree so that those who realize these. So we are going to provoke these two questions for France, says Yannick Noah, researcher at the University of Liège. So the first question is in relation to what we did to this manufacturer. Clearly, there is a conflict of interest of use even before the filming of the project. Between the first and second part, it is clear that you have already tried to engage the various means of conciliation, if not harmonization, to find out whether. But apparently, finally, what is your concrete plan to put an end to what is indeed and which disturbs? To hear you speak, we understand that the Republic has the eyes of the population when the project is already developed and the conflict is real. It is clearly in the war and you are wrong. There are legal ways, apparently it does not work. What is the concrete plan to be able to get out of it? And finally. The second question, it's me who has my home. Those who know know that since 97, we haven't seen anything at all. And then there is nothing serious. So the people of initiatives to come and be heard, that means something. I have never been consulted. Me, I call the promoters of the commissions, of the presidents. I will say, although it is not easy to give figures. For example, the 600 million for illegal camps. A precision, and it is clear. Earlier, you talked about the stock market. You also talked about the \$170 million. But for all that concerns

the envelope linked to the social mechanism, I spoke about it. The central is all that. But what is the sign that she is? What is this forecast in terms of numbers that concern. This whole mechanism will go in the direction of social development. It feels like there isn't. There is no other vision of the future. There are intentions. We have heard of. But, in terms of production, can we also have films compared to those made? Dimension. I'm fine in the Solo Garden. Thank you for associating me with this press briefing. My first question. First the daily accusations. I said you held the whole project hostage because you didn't justify it with fear in research from start to finish. Twelve of the deaths behind justify the sale of the formats of the boats. Not the fact that you cut the stock to 7%. The idea of a body to listen to. And my third question is that of knowing. Because you feel targeted or? What is your job? Have you booked a suite for your detractors? After success? What do you say to the population about social measures to lower the population? Almost as much as technology. When I see all those who are volunteers. So I followed the hunters and now I've gone to seek the pleasure of social and political life. But he's not the one asking my question. It's about the notion of social stability that you evoked both to know what I wanted to do, but to. What stocks have you eliminated? Seemed to me to be related to the logic of exploitation rather than solving the problems of local communities. You mentioned the possession of the dam, the rehabilitation of the railway and the rehabilitation of major roads, but unfortunately at the entrance to the region. Don't you find that these actions of the police have the logic of the exploitation of resources, the problem of the local communities which are the access to water by destroying for example paths, the waterway and other utilities in the dwellings, etcetera. The. The religion. Hi there. This stay as a journalist. I will register a single injury at the end of this first match. That's what. By. By. Justice. The four-month stay. Namely I do not know how you spoke of. He had introduced these documents in 19. It is sometimes necessary to tax them in a manner in relation to the contribution to theology. Said for more than eight months and who at fifteen? Morning, I said there was no problem. Why all these delays that you have seriously conceded to scientific forces? Instruments in due form with regard to the missions. Jointly. I'm on snowmobiles. Add divisions. I have two small questions. First, I entered the room. I would quickly like to know the meaning of the advances. It really caught my attention. And then second, you talk to us. We are aware of the minerals we extract. We see on your. There, we see a woman and then we see things. There, we come to see him. Concretely, it is as if the child cannot speak of life in place of the term. Swinging children. That's it, it's called the idea of occupation. Thanks. It's during this first round of questioning. Translated into French by the plural of ancient texts. There is no particular meaning based on the free trade agreement and also. I think we can also be just an optical illusion. But the image you have there is not a valid reason for those who speak of Libya, that's English, so that currently also represents. But now on the side who in Poland? And that, these are regimes that are sitting on this file. It's not a prison, it's the migrants, the first to have the right to die, the right to work, not mining rights. You have the great theories. You have the small business permits and you also have the permits to lodge in the most involved in this sort of thing. So we are going in the right direction to quickly come back to these things as well. When I want to inform you, Mr. Legislator, that indeed, if I may say so, Peter Pan has not recontacted. In fact, I sent the patient to him today so that I could answer all these questions. I expected more clarifying questions from you because he informed me that he had sent you a letter. Here, the company ordered an accurate portrait of Georges Papandreou in his office and clarified his point about the questions and not only the enlargement. But we also asked that you can put together a team, journalists, researchers and NGOs to come to the site in order to have access to more light and clarification in our callings during the calendar. A team from Karachi till date. I don't see why this team that even today we were talking about. So we planned to be able to communicate by journalists who will go to the site because we want once and for all and that people can have access to reliable information on the site. So it will not be responsible. It is simply, as I said, a meeting in my office with the director of the platform. We have answered these questions. Only one question he sent was told full of time to be able to exchange the documentation. But can you come directly to the site? Yes, but now, a diplomacy team will contact you until today. Even if you're elegant, long

hair and by the way, we like lifting loads, a lot of social stuff. Otherwise, we do everything for the person. In fact, there is the mix of the investor who comes to invest and who comes to profit, isn't this from an annuity? And who has the hope of. Counting and so on and very often it's like these questions. Boats or drop off in a classroom. May be a small percentage of the bulk of the problems posed. Everyone is making money and no one is going to take the time to. That's it. Since the other media have joined forces with journalists. So when we say that you are a Geneva, I think the experts had echoes about the donors. But one thing that we arrived at a layoff date with another expert will never say that. For these financially too difficult calculations, we wanted to give maple syrup by saying this is what it will allow you to take if he does not have a private research permit until a very small majority does not know now that he has a research permit on the research permit, since the research permit or the research can result at the end of 50 years has nothing to do. So we are not committing to issues of social responsibility, but in the future. To this question, there is a nuance that we make on the case, not on its responsibility in social action and social responsibility. It does not produce the weight of social responsibility, even if it is a resource grant. So a board of directors can decide on this tax on the community. That's really all there is. And they are organized and they have offices, experts who take care of that. And that's why we said precisely in the context of this responsibility not societal, social, therefore a liberality of the board of directors of the reserve. They initiated ten months of work to clear the area. So far, we haven't taken much credit. We supported the management community. Otherwise, for a year, he made more than 500 for a handful of bosses, it's a matter of pleasure. So we went to Tunisia with a daily payment to allow them to have a little daily bridge and therefore to work on this project. Now if you have to come back tomorrow in terms of local law and charges first to have a lot of enforcement charge in its procedure if we are notified. The company that is setting itself up knows that we must now start discussions. But first, we can't go on, it's not worth it. The exploitation certificate which is obtained after payment of rights on the file after having transmitted 10% to the Congolese State. And then you will need a strategy for starting the work. There's a whole prerequisite mechanic that the optimists had us believing. You will start discussions with the local community. It will go through the governor who will give his opinion. And you, King Philippe, the mining cadastre? He will ensure that there is either not with the Minister of Mines, Social Affairs, we have not spoken of the system. Isn't it discussions on the question of the fields and what is remained to be implemented in particular? At least it's getting organized, it's going again, and so on. And complaints have been issued and committees are being set up. The mining code will challenge a gap left by local communities. First, you said here are the countries, what we call royalties. Hear therefore the mining royalty, whose share of distribution already in need is there. And it was indicated by the that it is for the development of infrastructures, the care of the local community. But in addition, in the 2018 reform, we added the question of charges of zero 3% compared to the fourth or I was before. We introduced this land in the tips. We still have involvement and experience of the funds that civil society wanted to do for him. So there is a second. But there, the development of infrastructures, it is the other major infrastructures. I don't think the road will rehabilitate the railroad which is the cheapest way. I do not think that these infrastructures will not serve the population. Finally, we must create a new transport network already. I told you how do you get there? At the limit, you can see surprises or fish that come to Burundi that comes from your country in this region with Lake Tanganyika, et cetera So developing infrastructures and profitable because these infrastructures do not belong to Brazzaville or to others like these infrastructures, it is said at the end of projects or in part to the State. We have been there for fifteen years in the service of the French State, but only one mode is financed against those. And then there you go, we settle into a conflict with the community of Mali because now they will know how to get their products out. They will be able to have a quality of life in terms of social development because they have ideas for nothing. But they arrive as a man who was prevented from conducting and hotels, a stadium, et cetera and people are only going to leave the events that I put in. Oh good? Bah people will leave, we have no elements, no meeting room. Help you to train there and young people come from Colombia, Tanzania. They come to the same studio in

development to bring you both a job or other activities, and so on. So if it goes quickly, it's quite interesting to see and that's why we integrate into a project. There is no value development for power plants, water treatment unit, et cetera but also special economic zone for active acts. For a subcontractor, I have a contract with others, as I am a subcontractor to put me in the special economic zone. So I'm ten, right? Not being able to pay all the taxes, et cetera So it's a request from the police. So what is done, it creates a long-term development that will make the city grow. The constructions are done and penultimate news after the departure, during the looting, there were more than 300,000 people, but today it is less than 200,000 people. So the project will really help the community. And the question of the specifications will be able to come back. In due time, as I explained, I will quickly move on to the last question and the others to intervene. Even Vietnam tells us that there shouldn't be a benefit premium So the project will really help the community. And the question of the specifications will be able to come back. In due time, as I explained, I will quickly move on to the last question and the others to intervene. Even Vietnam tells us that there shouldn't be a benefit premium So the project will really help the community. And the question of the specifications will be able to come back. In due time, as I explained, I will quickly move on to the last question and the others to intervene. Even Vietnam tells us that there shouldn't be a benefit premium

[01:24:51] in relation to this practice. Civil society launches into abstraction so as not to resist initiated projects. I still don't get it, but I mean, I think. Tensions between parties. In this kind of financing. This is the software term for all contracts. It's unprecedented. Indeed, it is a contract. They provided for the possibility and the person was never solicited by the mechanism such as the one who comes to finance the project, nor the one who comes to carry out the activities. This is the number of partners you are going to have in the partnership. It's written in black and white. Everything Carlos has done and that's an even bigger implication. Do you know that in the board of directors

[01:25:51] From growing up and being a board member, it's a group of people appointed by the board. Are members of the board of directors and produced report filed with the commercial court. Be that they made decisions either related to the feasibility study, or it is related to the development of the project for oneself. What does the funding mechanism tell. So there is no more hostage-taking. The notion of the majority should not be understood in the sense of such because it has been given a mandate. It's a five-year project. They did loads for me. We are 25 years old, we present research work for. More importantly, I don't know if you read that right. The first had sent someone, a geologist who was present each time the samples were taken. And for the drilling work, this representative of nothing was present and not trial minutes, and so on. We thought we existed to be able to announce that. Again now it is related to the concept of selling off. I heard that. The last time when the thing quickly did its intervention at 1.3. The first who said the concept of slaughter, ie edge, a presidential institution. For him, the spectacle offered to ten. At the level of the draft agreement he had in mind at the level of watering and hygiene, whitewashed by. Second element of the hygiene report, hygiene established that the sanitized session was not regular and we cannot live up to what should have been given. Over \$160 million. And that's why the Dr said yes, there is a plan B in his preparation. Same thing. The company said no, there was a sellout and tapped into being poisoned, becoming a magician with an evil power that every night has to pay. The general manager of the mining group to make an assignment. The 10% of women from 15% and to make an assignment of 5% whereas the traditional practice is that before there was a handful of blockages who wanted talks to file the feasibility study even leaving waiting for useful details . In fact, and all that for that. Wait until we are not at the feasibility studies, it comes back and tomorrow, he will have access to everyone. So, again, you and another reporter we have are the only ones to inform you, create a 5% session. We are not aware of the company. It was is a taboo, is not aware. It happens like that, it never happens in the street, it happens in the office. Was there a council of

ministers that approved this? There is a whole mechanism that must be able to happen. So then reverse your expression to find out who brandished the state plates. But if he has none, it is hardly mentioned. He is in the process of, the one who is even in the heart of the conflict. We learn that the expression of 5%, there is a section of 15%. Go read the unionized assignment contract. the State says I authorize the assignment to Vigile and there is a totally convoluted dimension to article 10 to 2. I am told that our parents made the transfer not of shares since we are in the company. We want the shares transferred. To Jean Michel. So will appear. Isn't this what we call the penis of this completely foreign family whose government never gave Kinshasa the authorization to provoke these victims who do not exist and who? It is a document in the public domain that completely implicates a company. So I can say that it is December 15, at the time of Chinese law, we say to ourselves that I am leading directly with two different legal companies. It's a theme here. I want me to complete the transaction with the parent company. And then, there are other companies that will come back, that come from the shareholders of which this is what has been done. We don't ain't Wakayama. So to date, we simply consider that the rights of the president are acquired. There, it's his. But the objective is not to arrive in this conflict. Once again, I insist, we must separate the mining rights. The project as it was. Today we have come to see who is that the project will have available more than 500 million dollars. And to return to the one who asked questions normally, we had planned an initial investment of activities in gas, mines, infrastructures, industries at more than 545 million dollars. And in the second phase, therefore of internal investment, one of transformation, we went from 115 million dollars. We went through 1.1 billion for 300, but it's very interesting because we have to we are talking about stock market law. Otherwise, after telling you stories, we need to talk, to speculate. Well, we do fundraising, we make financial profits. They are serious people, they are people. It's not smart people in the international community. We arrived after more than 18 years, we saw policy projects, and so on. We see the international market to present a project. The people who are doing the beginning of 2015, they are doing surveys and just before the start of the project. The project was at 5 billion before it even started. And it's not. You have to be serious in the management team at the reference board level. You said? You lost. You have it all. We can give you their identity or make them move, which will be able to check if the world is small. Today is' impossible to say what you said. Why do people turn into research heroes before they can even launch the project? 4 billion human beings. But there is little chance of not not giving billions to the earth. But stop saying no and are we going to move on to the population of tomorrow? Don't we simply have the leadership role to reserve abroad? In the public market, I was told it was good to say the children's statistics, you must have access to information that allows you to understand. It is neither about the vast majority of users, nor about a sharing did not invent anything. Belong to the state, the numbers. We fought for power and there are funds available. We are is beaten to be able to carry out an innovative idea for the first time, the Congolese State to develop a project, we build infrastructures and the request of these people of whom we say the government, the envoys having to question is what you know their fate? There are people who invent incredible things of tomorrow. But it's still not Quebec, that's nothing.

[01:34:12] It's a separate company from Buenos Aires, in a state mailbox, but it's still a point of achievement, while we lack the means to prepare our projects. And in terms of social figures, it's to be very, very conservative and cautious because, as we said, the discussions will take place calmly. There are de facto experiences, previous techniques to manipulate others and it is linked by project, by project and the difficulties. But today, we are worried, fearful in the project that was presented by the reserve, it is that for the first time in an interdependence without, it cannot be controlled. It's a power of control, even by all the other companies, whether it's the special economic zone, let it be okay and the processing units that produce the experience in the DRC of the units of this effect. The promoter was not aware of the mechanics of the launch success and all the mechanics on the electric cars that allows us to benefit totally. For the first time, we have investors who are a little principled and who come over two years and we are supported. Typing you on Google goes as if you

think so, we will get right on it in my approach. In the meantime, it takes special economic creativity activating others because the state will come to the population before asking for money. But we must be able to draw all our thoughts from it. So allow these or are we ahead? If we can integrate those who are at the source, there are some who are financiers, they make people smile, they are tired of taxes, etc. Both develop the stock, but we can go further. So yes, I know, it was a flyer that was presented to you? We will say everything that can be reproached to the project of one of those who are human beings. I know you can't fault it for being a speculator. What you don't know much about? Mining industry? Come on, we're not asking banks. The plaintiffs are speculators. How did they manage to raise 4 billion dollars before the start of the CAP project? And what do we call in the building industry? Why did he join them? And today they are among the real majority shareholders of the company and. We use technical terms of the law by saying that when we need to go in the direction of its parameters, it's just like in everyone else, people who are not regulars, insiders. I do not believe that there is a platform that we make suffer. They do not see that these taxes and in that time, it is the Congolese people, it is the Congolese State. But it does not last a majority of them. Isn't his percentage quota today? And people have made the measure, everyone knows it to keep it. But what the hell is going on? You are the first who should crash in the kitchen. But why I do not believe that there is a platform that we make suffer. They do not see that these taxes and in that time, it is the Congolese people, it is the Congolese State. But it does not last a majority of them. Isn't his percentage quota today? And people have made the measure, everyone knows it to keep it. But what the hell is going on? You are the first who should crash in the kitchen. But why I do not believe that there is a platform that we make suffer. They do not see that these taxes and in that time, it is the Congolese people, it is the Congolese State. But it does not last a majority of them. Isn't his percentage quota today? And people have made the measure, everyone knows it to keep it. But what the hell is going on? You are the first who should crash in the kitchen. But why everyone knows it to keep it. But what the hell is going on? You are the first who should crash in the kitchen. But why everyone knows it to keep it. But what the hell is going on? You are the first who should crash in the kitchen. But why

[01:37:32] is the president of Zimbabwe joining him? It is said, from 300 billion consigned because you completely thanked him and will not go here to \$ 7.52 dying and to the license here to that of Pont L'abbé, put on leave platform there a short time. Gazprom owns the license, but a light payout program of more than \$2 billion knew the boomerang effect of its success. To have spoken for good. Go read the report by the end of the year without needing to talk about those millions of dollars. So we are telling the facts and we have allowed ourselves today to be able to speak because as members of the government, it is not us who have done much. They say there is a cheese, billionaires. For a boss, this is not is not correct and to say it for given many exchanges. So don't take this, but here it is from La Gobinière. So do not take terms that are part of it and that seek to deny the door of prosecution. Radio silence. But stop, we are missing a science. And the people who are going to do what? They are going to integrate us into the African market and are going to leave. You know, this project, you have more than two months time to spread the plant in Zambia and birth. Read on, see what happens, so we're missing out on pitiful opportunities whatever the mechanics or how we do it is to get through the first license and have a celebration. Goodbye because those who don't know how to drop it further along the mining concession don't do not belong to the same patient as we belong to the Congolese State. the Congolese State counting only the fingers the fingers. There is also,

[01:39:28] I think you asked if today in Manaus there is

[01:39:31] diamond. It doesn't belong to the billions, but if it had been, did it offer to come and go and see the work we've done. Then again, you can take it. In early 2010, in the midst of the mining crisis, demand was excellent. Copies, there are no details. Follow my gaze.

[01:39:58] As he was born on the ashes of some. But there was no, no connection to us at the time. We really thought, we went in June, we were already there, we hadn't even said it's not yes, you don't have time, we start, we take steps and later, investigations. What will we finally find? A feasibility study? A feasibility study because. We will find a study of. The transformation of the state of the company in the company will never wait at the level of authorization. The fact of having a departure for which we understand why it is ruled out voted because we will find out elsewhere if we have carried out investigations. But throwing that out, all he didn't get was that for the point of information, we trust His Excellency Mr. President. He's a Christian. We have heart. Where there is truth, there is always a shred of truth and she will repent one way or another. This project is one of the most ambitious projects in the state. We all cried a lot for the other soldiers, the police, the batteries and so we have in hand. But that's not our next step, our generation. These are the questions on which we must go quickly. But the conflicts, it's been more than ten years, there are always some in the departments of the agricultural surfaces, et cetera. But the parties always end up agreeing. But there, today, so no longer possible, it's the project itself. This is where we do not develop debates at 23 billion. People say they have decided, the feasibility of this project, how we develop, how we do it, and so on. And each year, we cut from this project. Nothing. So here are the elements of colonization to admit that we cannot give figures. But a more important element is more than 5 billion already planned. We had the idea of imagining our social coverage for the project. We said to ourselves if you have the special economic zone, a company that enters the special economic zone, we will invite them to be able to give X annually for the community. So if I called the mining royalty on July 30, if I have the benefit at the level of the specifications. we cut from this project. Nothing. So here are the elements of colonization to admit that we cannot give figures. But a more important element is more than 5 billion already planned. We had the idea of imagining our social coverage for the project.
