

[00:00:23] However, we can start. We will pass. Moving from speech to the simplest meditation in the representation of. Initiated by a gardener. To change that. That's why it's 89. Pfffff.

[00:01:09] He got information. Either because people are not capable of their beautiful history, to know a little more about the project, about the state and of course above all its sense of values. And so, it was also about seeing. Considering that it has put into circulation a main market. Not always well before we can send a message so that we can give the necessary qualifications to all the statements that have been made and that lead to the reputation of. The majority shareholder with. International. More important to know in this statement, we will be able to do what is in French law. The first point is to represent. Amused by zeal and technique. I have a hard time finding the second one. What do you think about mining rights? Is it not the Alcan company that is the company of the partnership to be bound? Thirdly, what is the state of play of the current situation and what has been projected in relation to the draft agreement in order to stabilize the structure of the. The company had requested in 2016, The Internet had been set up, is it not for the Domitia project or we had granted to the company Vidal which will become a company under the rule of law and a right for companies that had obtained, is it not, from the Department of the Portfolio and the real estate company that was born? It is not the old Livatag in 2010 that is reborn from its ashes and therefore that will be able to acquire a research permit after 65 years for life to be able to develop a short- and long-term project. There are one and as well as other substances. So this sale occurs because of the first transaction that will be able to do with the first. They will establish a partnership agreement. Our arguments for a gentlemen's agreement mining right and seven on openness to fairness, right? Now that I know, it is not long before this is this second term. The peaceful society was not yet there. So there was an agreement between yes and it will run and for the creation of a company that will be called Passport and a partnership agreement with the presidency of John Legend. And this is not the first or a new one. So at this point, at this point is doing very well. After that, it's not too much the truth. So don't wait for a hook by the zebra so that you can help him structure Manon's project technically and financially. Note that until then, there were several speculators on the labor site. Several months ago, you were pushed towards the destination phases and you can get started. And in this case, no one had managed to attack the presence of a temporary team. Well, when

[00:05:29] the site was approached, it was given the following conditions. Firstly, it had to join the partnership agreement in the Belgian Union, and I would remind you again, a pleasure never existed in Belgium. So, it adheres to this partnership agreement and it will acquire 60% of the shares of the women who will become the company. Latour has nothing to separate its shares from its shares. At the time it was a company in Spain and well we will ask it to be able to produce for 36 months a feasibility study,

[00:06:10] not only to produce a feasibility study within 36 months, but it was also necessary to raise funds on the international market. This feasibility study, according to the agreements, was that it had to be admissible not only with its members, but it had to be a satisfactory study, according to the real estate company if and only if the rate of return was 20%. And fourth position, it is not only in very good condition. It was therefore necessary that the structure that had been put in place could bring the project as quickly as possible to the Super thirteen 350 transformation. So, we are faced with a research permit that has a duration of five

[00:07:04] years and therefore in three years which is within five years. Well, the company may have managed to be able to establish a world-class feasibility study. Why world class? By the way, it is called the lesson. We are told that the Devils, for those who are in the film, they know that this produces orange peel. This is the greatest hope for this project. And as we

saw then one of the greatest projects of the documentaries on beauty deposited then at the time of the fish discotheque, there had always focused on the pubs. That is not the case. And it was necessary that we put substantial means with such a drill to be able to fully move the rock and therefore give in substance an evaluation. The hope of the long-term discovery was so great that the first thing that was done was to stay with the PS, not His Excellency Mr. President. This unique information and it had been made and promise had been made that the company would power when the work to be restored with respect to the works of looking to be able to come back to His Excellency Mr. President to present to us what is the first result? And so now, let's go back to the planning issues. Both have complained that society has abused its power and therefore this abuse of majority has held society, which is not the case. Remember, we insisted here and the figure of hundreds of documents was in the public domain, so that can be accessible to journalists. So this figure and it was expected that there would be three representatives of the company to pose at the level of the board of directors and at the level of management. You also have two representatives of the Real Estate Company and independent of the Antoin Company. So it was done to intervene, anonymously in some cases, as a representative whoever is on several occasions in the meeting of the board of directors combined with the Assembly. Pierre and Jean Yves. They regularly sit with the president Laurent on the board of directors and also you have the representation in Spain of the English company that has received a mandate from managing so the current situation of the company with strict application. Is it not such provisions in the JT? In the management as it is of implementation and well of implementation of the space, no chance of being able to manage the project for the future. Is it not to meet the conditions that had been submitted to them at the presentation of the JT? Is the TF? Because the feasibility study was submitted within 36 months? Yes, the feasibility study was submitted on time, easily. Was the feasibility study sent to the mining company? Yes, in April, when the company arrived at the hopeful result and conclusions of a feasibility study around the month. Isn't it

[00:10:51] a little bit exactly the feasibility study transmitted to the real estate company? And we have seen the reactions that more than eight months later and even the reactions that are coming in today, which all the other partners person make a debate on the study of feasibility. On the contrary, the presence of the feasibility study soon led to conflict, but even made it possible to embark on this project. And so, for the record, society

[00:11:27] Taton will hold. Who is part of that partnership, who was part of that partnership? Well the company to become had been paid at the time in 42 in terms of shares for more than 240 million shares in the company. That's right. These are common practices. Isn't it in the mining sector? And so you have other examples of the fact

[00:11:56] feasibility studies? We were told what is done after entering the shareholding is also part of their mineral study at the level of the rock. So all these companies

[00:12:10] under the tutelage of. And then there are these conflicts there are actually mine. Is it not a shareholder to the company of what is possible to return? At the level of the prostate. If you are family or partners, it is the shareholders. They are the ones who have made decisions on one of the resolutions that is in the satisfactory feasibility study to make the feasibility study of this credit. The information collected by the administration of Miles for those who are admitted and who have the expertise of 1500 points, you can not, is it not, send samples outside without have given the amount of the samples to the administration? So the accusation of holding a geology department contributed to this most important level. We hired a real estate geologist to be able to participate in all drilling activities. I hope that it will position itself on the site and therefore this agency of geologists was indeed present. Is it not up to Charles to

say that we can rely on samples, on transport, et cetera And so also, you must know that the most important part in terms of satisfaction is that the former should be interested in relation to the partnership agreement. This is tomorrow's rate of return of 20%. However, the rate of return has been multiplied by two and therefore it is 30% in the feasibility study and therefore at the international level for those who are insiders. They realized that this feasibility study in just two stages revealed that the DRC had the largest lithium deposit. Phenomenon after. But it is not the most common in the world and the second that followed that of Australia. And so, we found ourselves at the end of our career, up to 200 years old and for which today, there is, is it not, that set of telecommunications that you have seen through the media and you now understand a little more about why we got to this point. And so, you will reassure him to take stock of the feasibility studies of this report that was made on the feasibility study, comes neither from the international community nor from the experts in government, but in addition to sponsors and other partners. It is not a complicated project. It means that we are moving on to the deposit, on technical issues, but these are the way out. And the fact that it's a billing, it's by the calculations, isn't it? As for the different markets in this kind of work, its precedent that is still well known, there is an international association of engineers and water who brought out the information, in this case about a project. This information is simply made public. And so, when we now go to the other issues relevant to the license, it was conveyed and it followed the statement. of both people. We have indicated that the state and society have to date. So we must be clear because in the language of which it has been used by many, many have said that the one who modified the current, the current permit of exploitation, it is the company. Basically, that's not, it's not communicated. It's not wood, it's misinformation. The pharmaceutical company is the majority shareholder. The paralyzed society has no mines. The mine is considered by the Acre company in the contract, is not an Australian company. A lot of people got the message across. It is a company under Congolese law that comes from the export partnership of the company Nature Libre to intervene to create the Katangese crossings. It is not an Australian company, it is a company that has signed correctly in application day. These two parties to the commercial court would have information on the platform. And if it had been, isn't it not to back down? And so the bill, then, this is the bill that is the partnership society. So it's not up to the one who was going to present a feasibility study on a case-by-case basis. So why am I wrong? But its name, is it not on this study of. One. This brings a leg to the school that asked him to be able to present his studies in three six months. Two. Since 2002, the intelligence of the Congolese legislator had introduced the concept in land law of affiliated companies. Affiliates. You go to article 46 of the mining code on the grounds that mining companies are those that have more than 50% control at the project level. And so these companies, because you can see anyone, can go international and say I own the Parentis mine, but there is no title of Spain established for

[00:18:11] to say that this is what is being prepared is that a few years ago, isn't it on the stock market? And so talking for subject, isn't it other projects and its subsidiaries? But there you have subsidiary companies of project companies that are to facilitate the bonus, and so on to ours. It is an affiliate under our own legislation. So there is a misinterpretation. Is there a company as a date? Does it have an obligation

[00:18:45] to do social? Does she have an obligation to say that, I will be able to develop, and so on, a company, is it not, who should and who owns shares by exploiting the farm? We're the, isn't it the license? But it can perform so-called corporate social responsibility acts. A It is societal, this is what is provided for in the mining code. That is? Its board of directors may decide to make useful offers. Is it only 21 years after doing what? For those who do not know how to help a city and a mined territory, there were weapons, several divisions across the territory and no one could move freely, the time to recall the made in Germany which has enemies even for the territory. And in

modern times it was called the triangle of death. So we removed and several other activities that were done, which are in particular on the commune and other activities. So, it's not that we are today since we have, we left Europe, it's not, we've already gone under the chains to say that this is society 27-year-olds have issued the research permit and this company has done nothing for the people. France it's really shameful, scandalous all because we have laws and the companies' research permit originally five years and for five years manages to present 33 studies of feasibility. May 4, 2000

[00:20:30] 21, he filed this feasibility study with the mining cadastre. The real estate company received the feasibility study in August, after more than eight months without reaction. This is why we see reactions today that are more about numbers or billings. In a company holding a research permit in the Democratic Republic of the Congo, the objective is to be able to conduct drilling work to request that this project is viable or step? Because it's a bit for us precisely a situation or it's not good. And in this case, it was done. Was this project economically viable for the time that was made and well there before the end?

[00:21:21] Isn't that the 53-year term? I still remember study of the loans had been submitted and several reports of the board of directors for this, it will also be necessary to see with Courrières, supporting evidence, is demonstrating that it there was a charge. But that's not all. Is it not to be able to say that in 48 months you have made no reaction? The only condition that is originally planned is that Areva's feasibility study has a 20% rate of return. You need to raise funds. Or are we an example? For me, it's a request, abstraction to be able to explain it because we love it. Isn't it? On the stock market, we sell phones in Asia, but not a company that does speculation has managed to avoid today to date, the only company that has done, Isn't it investing by demonstrating the economic value of valuable projects? Today, we are talking about this project. This is precisely because favored by the rules of hundreds of millions of dollars. Or why extirpate, is it not from the basement the useful information to share the first housing with His Excellency the President of the Republic and later with hope, all other authorities involved in the defence. So today, we find ourselves with people who dared to give it as if it were a principle. Again, I point out the company that owns the license, it's like parting with mining rights with questions about the partnership. More importantly, it is that in the file both at the level of the mining cadastre, the cadastre, it is a service specialized in the stated objective that received, a year ago, at the spa home, the various information to the various specialized services. And one of the studies was done and therefore as a result. Therefore, the environmental issues were addressed to me and a favourable opinion on the environmental impact studies and the environmental management plan. All these studies received a favourable opinion. On top of that, there's nothing favorable about cadastral reconfiguration, is there? Third, and most importantly, mine management to re-evaluate the feasibility study. And there are fifteen experts who sit down to be able to demonstrate that it complies with the schemes given in the mining code on the presentation of feasibility studies. They gave a favorable notice of compliance which sent a letter to the mine management that implied a favorable technical price or a favorable opinion. While for Apple, ours. For 2002, the owner recalls that the DRC opens its doors to investors and Prince His Excellency Mr. President has done a lot of work upstream to attract investors. He has this quality that has come. It is recalled that we come to give in in the mining sector on the basis of the principle following the first one that comes, it is the first that is served. It is not about size, height, color, or

[00:25:16] of its origin. But that's, that's the principle we have. Who is the problem, is it not by section 30 done now? According to the first one who comes, he dares at the end of the research to go to be able to make explorations. It costs money and it is a risk. We even have \$100 million, but nothing concrete. But if you

[00:25:38] are lucky and that it happens by the situation, we have arrived. Well, we were the first to be able to say that on the Panama site, we have one of the largest deposits in the world and so we were the first to be able. So the second important principle is that the mining code of your country has decided. Isn't it the mining code, the

[00:26:03] discretion according to territories? This is where we cannot give you an operating permit the operating permit. Decisions are already taken at the level of Article Sept 22 of the Mining Code. We are told that these are acts of the six months, that is to say those that draw. Who are you? By taking up the technical material that is

[00:26:25] given by the mining management. But in the 2009 elections, which 50 chambers have therefore started, you have 20 days for a cadastral opinion and the favorable opinion had been given. You then have at best 60 days. Between the management of the mines and is it not the team of fifteen? The team of fifteen within 60 days to 50 days.

[00:26:49] To be able to evaluate a technical feasibility study and give a notice of compliance. It sends this notice of compliance to the mines directorate, the mines management, ten days in power during the favorable or unfavorable technical visit. Plus, you have 180 days a year, right? Both specialized services on environmental issues. That is not up to the Ministry of the Environment and the Ministry of Mines and will make a decision. Is that favourable? That it is not favorable? And in this case, the three decisions have arrived and the account is not there, says Article 71 that Minister Dominique de Villepin makes the decision. He just notes the existence, the hope and the observation of the existence of these opinions, a decision that has already been taken. I therefore note the existence of those opinions. And it is either if by misfortune and the kick of the child of the minister, the decision-making against these three decisions, we have a ticket of which you have the possibility and why of merry-go-round or by a decision to give yourself thoroughly. That's the law on technology that has been put in place. It was perfectly respected and the technical, cadastral and environmental advice arrived. But this not favorable. And so the minister has no other choice. Isn't it just making a decision to be able to zoning? Note that we spent days and days celebrating well. Remember that this was the first license for whom? The DRC lithium license. What happened in Zimbabwe? We have the IP addresses of the investigators. When Zimbabwe learned that the DRC was going to set up one of the largest deposits, they probed this small unicorn project. They followed the president. He made a decision and they proposed what we had proposed here, including projects in a special economic zone. They were deceived. Live the mine. They concluded. They won. They integrated it into a special economic zone and they gave, right, taxation? Why? Because the cause was who was going to be the first to have the permit and have a maintenance industry. And when you go into global and exponential demand, the only misfortune of perpetual sports is to be a separate society and put all the audience in it. Do you understand that someone can misuse this information? But as far as the whole mechanics of respecting the system are concerned, it has been respected. While we do not share that such reacted in meeting or not in the observation that is imposed on you. Abuse your position, do not oppose the management of BCC as JP would say. We do not have money. You come with the money and the publicity when we have a study of the programs and more feasibility. OK. After the words, the money on Friday, we have \$500 million available today for the first phase of construction of the mine. 24 months of construction. We need the processing unit. We need space in the central Pyramid. We even did more. We also have a glass of water to do continuously. Why can't we innovate since we come up to the age of 60 eleven of the mining code? We are even being asked for a firm commitment to demonstrate that we are going to do local processing.

[00:30:36] We said we can do better. Why can't you give us the opportunity to do a public-private partnership on this project? This Parliament will be divided in this way. We do what is called a public-private partnership,

[00:30:52] a spontaneous offer. We come to the government with two offers, a financial offer and the other technical one. The other technique is to sell. You give us, through a collaboration agreement, the opportunity to be able to develop infrastructures that are lacking. Isn't that exciting compared to this project? For children. I talked about who you seem to have at night, we feed them, and so on. There are uncertainties, there are roads, and so on, but at the moment, there is nothing. So if we only put the project of the said, there will be so much pressure and because it is a disadvantaged region. We come to the government, we submit, it is the Prime Minister, we see it as an expense because there, we. The competence of this issue is not synonymous, but not necessary, with the portfolio. It's the government, so it's the Republic. And at the same time, both are demonstrating support for the U.S. funds deposited. That is our strength. Rehabilitation of Manono Airport, an international airport. Rehabilitation of the railway of a section of railway. Rehabilitation of the road. Doesn't 20 Minutes not want to set a date because we found that to be able to release mineral substances, we had to be able to go through hospitals? Rehabilitation with some work at the moment. Is it not to use all the other activities to be able to integrate them into the establishment of a special economic zone? We have the impression of an exceptionally special service that will become the key since in the Council of Ministers, the five decisions, if I am not mistaken, 36 or 46, the Prefect had been reminded to use its special acronym for the fold and development tickets. And so, we said let's make a special economic zone, you have the list and next to the city, you have the special economic zone that will integrate all activities. So if we put a foundation X instead of zero 3%, hasn't that been applied in the specifications? We would impose a figure, we impose on each company that is found. And given the craze, the people of the area and all the activities that we had planned by saying we have 1000 companies that are in this special economic zone with conditions advantageous for these companies. Because we need to be able to trigger the click. But no development to what we reassure myself I think. But since all these small companies etc etc having business contracts with the bata company and so if you make a 24.0 per year, you pay 1 million dollars. We make \$1 million paid \$ 500,000. This is your feedback on the community of Manaus and this money will be used to be able to develop for it. Based on the experience of other projects, millions and millions of dollars can be made available to this community and developed in a completely developing way, for

[00:34:21] the first time, isn't it

[00:34:23] social activities, et cetera That was, but it is not the same process. Is it not the work of a research permit holder? It was submitted to the government. The part of the financial offer what was financial was what we had started in Panama. Should the group enter for the first time for a company, for the government to come or join on the stock exchange, on the stock exchange, isn't it Australia? He is not a speculator who has just started here and that has never been done in the DRC or in business. Sitting down with you and the offer that was represented represented, was it not, a sum of money of more than \$166 million? And we made fun of the Congolese state as much as by the obligation in the crown society and so we must take this 10%. Thirdly, there is the development of processing units. We have an appointment the first time. Instead of waiting, we want to pay. Are they not processing units? And at the time, already around 2021, we will be able to sit down, is it not with the company that makes it one of the subsidiary companies of capitalist society for the development? Isn't it from the value chain? I can tell you that no one at that time even knew

what you were talking about. There is evidence, we have been asked to do this, the Minister of Industry told us. We organized workshops. So it's not something we're going to focus on already showing workshop minutes. We sat down with the Ministry of Industry to help with the development of if we want to put processing units for those who do not seem, we are at the base of the forum on the value chain pasta. We followed one and when we met one of our Congolese brothers who is our doctor and specialist in medical products, it was a brilliant idea. We will listen to what we are going to, et cetera, and we will push the government. Then comes the Department of Industry, which will later refer the matter to the government. A forum will be organized on the value chain and share documents, exchange with it, exchanges with all sectors. I think we wanted to, they listened very little and therefore saw the world at the same time. Isn't it from this forum? The president reminded the president, is it not the Prime Minister, in Parliament, to be able to appoint Aristide as a member of the committee.

[00:37:13] national on the value chain? This document is a perfect illustration, a whole with a State, with several organizations in this committee and this will of the country, the monitoring committee of this event. And so, you have in this vision there another financial day. As I said a little bit on the increase in value of \$167 million, which is far exceeded. Moreover, when you hear here and there what has been proposed for the entry of certain companies into society. But for the first time, did I keep myself in top shape? Congolese, for the first time have made narrative holes in the public sector. So they want the Congolese state

[00:38:03] be represented and sit at the table. At the same table, decision on the fluctuation of markets that put the intelligence that it takes an invention of technologies. To be able to make parties, you need decision-makers. There are brilliant people, financial engineers who can advise the state at this level to unlock all our affairs at the same table and therefore decide on this state market and think of the children who have gone further below us to understand this length. To make a study, Google did a study on the best destination to be able to make the value chain of a country. Well in this study, it was shown that it was the DRC safe compared to all countries on a set of things. And so this study was presented at the forum. So it is still from the DRC an invisible destination for those who know the diplomas, it is a design contract. If you are not well, you are told that I am the owner. I have no means and I do not have the technicality that I would like to develop. It came based on the principle of first come, first served. It is that in the mining code and we do not take an example from the man at the origin of the country, the principle that is applied for the later in article 34, it is

[00:39:30] that it is the first comer. So it's a fresh one. We come on an investment adventure that can work but can't work. But when it works, elected officials talk about development. I am bad because I asked that this project be presented, that I want to associate and that my support. Long before all these discussions, there are

[00:39:54] supporting evidence. These declarations, if they have been submitted to power. So. Finally, this financial envelope, another more important technique, is involved. But the development of infrastructure, we, I remember. Another way for the other the Casamance power plant and so later, I will get to that point. At the beginning, an update on the situation in Darfur,

[00:40:23] we are now in the feasibility study. Had been presented the opinions of the citizens facing the that this time, it says the opinions of the six, a favorable opinion environmental, favorable opinion, technical disaster, opinion of arid conformity. The minister has an obligation to apply section 75 and so we happen to be able to apply today in terms of operating permits, which permits do not allow us to be able to. So another condition of the partnership was met \$ 500 million available to be able to start the project, \$ 500 million. Is this a story we tell? I see

that my little story is that when we were able to table all these offers, the government, at one point, had a question is what money is made by them? Do you have any funding to be able to start the project? He will appoint experts. We have documented it. He will give us a delegation that is both a financial account of the State with this institution involved in the project with whom they spoke, which takes out the mule? They submitted the report to me for a vote. We will give our favourable opinion. We have heard, we have done things. They have the means to be able to develop the project and so this has been supported. Your project is stuck in your environment for the reasons you can imagine. Then the money is available. We had that in the North, in a situation as pointed out with a specialized service, but which does not have the right to be able to issue an opinion in a way. Identify highlighted. One. In one day. John Williams finished his career exhausted in this category. Is it not the shadow of the project and insisted on the intelligence of its provisions? We are not going to say that we are on a given day. We, we name the last five days, think that they have time to conceive the society of the album and to live and listen. But what happened? No one gives us the information, but we have seen in the media an acceptable operating permit of the world with a documentary focus to say no. We take the time to calculate the superficial rights because, as you know, in other sectors, the minister talks about the decision. It is already in the legal promise. But here, exceptionally, intelligence is the way of producing at all costs, given the mechanism of superficial law. And why is it that John Williams and others have reintegrated the superficial right that he had imagined the law, which is to say that we are facing, not a country indexed to corruption. We will give means to trade and therefore in the implementation of superposition rights to banks, which has enough to do without both directly. But we can assimilate and the boss emphasize, work files for the France and so in addition we have unfortunately. It does not excuse a man who charged and put everything for disarray. They fought and they recovered for their part to 50%, 50% of general. Otherwise it wasn't enough. It is therefore exceptionally that the legislature had proposed to him to give the possibility that when the decision of the Minister is taken, he is not notified directly holders of mining titles. He was sent a single Louis II

[00:44:16] of two years. One. It calculates the prorata temporis, that is to say the time that remains to run, because the calculation of duties on the year is that of the year. But if it is yes, less, indeed, we calculate pro rata, in other words to the company and the company has a period of fifteen days of being able to pay. But it also has a significant delay for a state of affairs not only pay the superficial weight, but it must give 10% per year various to the state. That is why he was given no decision a posteriori. Questioning the decision that was made by the cadastre and unfortunately highlighted is a public event on the right of reservation in the space of public officials such as the driving course of public money in the DRC and it has issued public notices remind us beginning since 2021, we have a new transparency law that protects data personal. The feasibility study is a personal data to the data company. So, everywhere in the public square, bases, above all specialized services including article eleven and the decree that creates complete data by limiting the possibility to pass

[00:45:36] more than five days without any intervention. And we wrote in our columns we

[00:45: 44] calculated the superficial duties we expect and reacted smallly. Let them know if we have paid because we feel the time of the Department of the Portfolio. The next question, then, is what you intend to transfer the 10% to the Congolese state by saying We are unable to do so because we are waiting to be identified by the capacity, then the law does not give the possibility. Oh there, it's just us! Why am I telling you simple that this? And so, what is going to happen in the meantime? It will happen that unfortunately this implies. I'm going to take the train to Mali. \$1 million in losses a day. Do a little calculation we are at 69,960, or 160 days. That is more than \$60 million. And who pays the company in which there are the following shareholders? So the state

that has to go back? You have a trial for five years and they are the ones who lose. It is the shareholders who lose. So it's not just about doing a little time, it's the country that's losing. But think, in addition to those thousands of jobs that should already be

[00:47:05] paid, those thousands of jobs that have already begun. Think of the boomerang effect of the different activities on the territory tomorrow. But also to think about the effect of the special economic zone, which was actually the element we wanted to use to attract other pharmaceutical investors, others, et cetera. We wanted to remind us that some told us they raised us, we pushed the cork further. The Minister of Industry will no longer help us to accompany us, et cetera. And so today, the Congolese state as important as that. Over \$300,000 per day. That is the consequence of that decision. But is it. We are not against it, we can appeal, but this treatment to the company Platform, which is in fact a company of the partnership. It's like I'm sitting somewhere, but I'm there under the direction and this is the first license. People came without going through the continent television and no longer the Internet. Here we are talking about the interests of the people, images and images. Isn't that project? That is the point. Isn't it Africa to talk about good? We forget, don't we? So we tell you now it is a president who has made so that the UN can have the minimum subsistence, it is society. Three. So it's a pure loss, isn't it? We can par. As we are wasting our time, I speak every minute that passes. We are losing money on this continent. So the situation is so dramatic that it is when we are a country of exploitation that we have the obligation to negotiate specifications. Six months later, isn't it the release of the Tamtam permit for whites? Even if there are social activities that are not those mentioned in the context of the charge, not without preventing how we will be able to do, how we will be able to take charge, how we can develop a more financially less greedy in quality. We are sending a very bad message in terms of the business climate for the DRC while the president is not traveling at all, and so on. shareholders who do not touch the first. And you have many examples or the situation to do but the law presents us the project and that of other projects. But we still have discussions that will come to an agreement in the coming days. So we have to separate things. But back to those two points and I'll be able to finish it there. It is that today, between, it is a concept of financing that

[00:50:01] is available to be able to identify. Today, you have the power of the council. You have work on the railway will have to be started. Spend the money to stop the financial fire that will turn in the fields. For those who have not experienced, take the train discovered. So what will you develop in the region? And further, while we fight. And I remember the professor who said that there, we were cursed for the amenities because we have the large deposits. And now we are coming to power. Zimbabwe, Paris, Chile, Argentina, Europe, everyone is able to move. And today, legislation is being created. I do not know if you have followed on campaign issues. So we don't want any more vehicles? Doesn't that not use diesel? And so so it was electric, so the market. Become bigger and take society into account. There is a reason to go and see a big market with us. We are told to ride. Who dared to propose for the first time to the Congolese State to enter the shareholding? So he is told to drive in cities. We want to do transformation rather than, as we were going to do, we need electricity. We say no. The money is available to rehabilitate the plant, of course. And the problem begins. You are told money and since we are in favour of development, here it is in structural unemployment. On the other hand, without knowing the opportunity, isn't it, once we have questions to ask, it would be an investigation or an investment bank. And so, as we know it now, we. Conflict is not only for profit, but not for what. It was published for one reason or another. It was precisely to be able to prevent. It is.

[00:51:58] The conflict began exactly when the company had published a feasibility study. Let us all agree that no one is complaining about the context of this feasibility study and has been done. Is

this not the project on the DRC and in a world to which society in principle has agreed to be able to buy shares of the shareholder at any price?

[00:52:29] And well after having passed all the agreements of the Netherlands that were made through the company when it was essentially not seeing us either. So we estimate everything else that has met. The event is simple, we want to see it because it makes a lot of money. But society's reasoning, based on the amount, needs everyone. You are a shareholder and owner of 240 42 million shares. A type of event when parties were in transaction. We will pay, promised during this trial must face arrests to go there. There was no payment, not \$6 billion in spending in the country. These millions of dollars are not enough to pay cash. The terms of the contract were respected. So on this question, it's just a question about the price. For the rest, we can lie, but no, nothing, at least that. The victims. You are all, aren't you, the best designers? Very much over the course of the investigations. In a society to be able to access shares, there are two mechanisms. There are companies that, at the same time, you have parts that are unstable. So when you are, you will see the statutes of the provident company takes a right of pre-emption. But the right of pre-emption was not the following two conditions. You don't do, or even immediately. I intend to sell my shares. No, it was at the beginning of 2019 2019 that the visiting company had seized mail or be able to acquire the oldest in order to fulfill the obligation, that of having done du and which consists of to lift as much as possible from less good health. We didn't build just in Nîmes. We are moving towards the. And for this common project, there were only the reports of the existing ones. So it sends a message for us to see each other. We have words, names. We are looking forward to it. Remember Yannick Noah you have a general assembly and in this one goes through other ways. You have authorized

[00:55:10] to Elected at discuss with the ministry of the Wallet for To see how it Hope power acquire his shares and What are the Mechanisms at put in before. Well when it has summer fact, that's how you Must do. You not Must step simply send one letter, but list of the ten. You Must send the offer Written. Is not that not of the fault some Victims or from opposition from To see How goes your part? But in the meantime, Remember you those who Want have some Evidenceone can the turn. One had already registered at government one offer financial of more than 60 or 66 million of dollars. Therefore it Involves one entrance in Scholarship 165 million of dollars. Then, in the Companies lithium processing, and then in the society of actions. Finances are there, we make a calculation. You See the debate? No only we enter this procedure, same in the society from development of the area economical Special, but in fact, with the government, it was the weapon Fatal an important for power develop and therefore It's again the same. All the Decisions Had summer Taken before same respect, is not that not the right to preemption? The letter was not than a simple formality since the letter but n has never summer Accompanied by. Is not that not two pages to the stage from the offer technique? And this letter has summer Sent to whom spoke this declaration who east the shareholder? Therefore they Will himself To find and they Will in take advantage of in do an important. Ask you the question, but this question east can be passed to the Council of Ministers. There are two persons who we Have more price in their presentation. Is not that not one Tearing which there are had had one session additional 5% in favour of a society Mother, same if I have Voted at level from the assembly General some society. He n'y a No information in that meaning. This No one who we shapeless than today, since same if she had said she, same if it was the society who has the time was on the site and the government had taken the decision that it had not step respected the Terms condition of the bet in work from that project and therefore based on the law of 2002 which Imposed that We can do license for two conditions. First condition, is not that step It's the number of elements of rights Superficial. Second condition It's the non-commencement of the pronounced some law workbench and the government had taken one decision. They are Parties in arbitration and I do not Know step by which mechanism. By the way, some Have said that there is, there is had an adage that is not step Because that it has successful at

break the she goes power. Is not that not in people's heads at use for the purposes of a assignment to one society or the government wants invest and us in Take by the streets, not as part of the organs Statutory. Therefore It's one few In the Genes and we Includes better What for. It's came whose? Because than we Same who are in that partner not are not aware. Therefore our problem, It's our approach since time. If you Have wanted to do one offer Written who had summer Conducted by the society and who had not no contract. It's Because that we had a vested right since 2009, the assembly General of the public that we had allowed from power seize the ministry of the Wallet who had not never cancelled at that day. And therefore It's an acquired right based on that right there. We are Gone do one offer Spontaneous at government, much more Important and Interesting for the country. That is not step one society who does speculationwho Creates those people. Others has put to auction with us at the Stock Exchange. Do local processing press one development from territory whose the trend east at employment some assets. We are In the north from Africa power plant. Imagine all the Opportunities. The positioning geographic some Behemoths from the other development. You Have the Zambia and Burundi, you Have the Tanzania. And more importantly, it is not not one myth. We wanted to approach people to say and us Will rehabilitate the way railway who Includes VNF. Like one border Recovers the ports, we put the pool and the factory from the other side, in the rocket. That is not not the Speculators who Pay already for isolate the world of night. A lot of Germans are Expected. We Want convince the government to inform, make transparency when same. And it makes a moment that people Come Here, not for the program some media, but for reading folders that has one value economical Important. And if we Do processing engineering some Controlswe Will reinforce the market and be at heart some Debates. One goes to go with Air France at same post and us Will power in March. He east difficult to slice. It's 86 000 Tonnes from Programs therefore. It's it the truth, like Said Plato. He reminds us very much often is not that step Socrates? Said Plato? It's my Friend. But the reality facts east again more that discipline, Because that it east the truth. What we Must we pass in As long as Congolese for press one project. The alone thing that they Make It's that he y Has at less, It's the development of the project. Build for 24 month and To see central time in time. Be develop and allow from sports to thousands, thousands some Congolese from power have access to the residencefrom power have access, is not that step? Therefore these are the clarifications to be made and to. I don't Know step if it y a. The Other speakers Have some thing to add, especially. There, then we Will go to the stage. We Will therefore go to the stage Any questions Answers, therefore exchange the members with you on the issue like you have it. And we goes take one series at each time five questions thereafter for answer at those questions and take one series five questions. Initially. Before we speak. The question. Thank you Mr Weiss who goes to. To A few days from the action compared to that who had. Ok thank you. But already us you Thank to have Answered. The organ supreme launches then for deny questions Problems quickly. One goes wait. Ok. Hi everyone. I will have two questions. The Internet users who do not have step aftercare Abdel. Step All right so as to that that those who to become aware those. Then one goes Take the gloves off those two questions for the France, esteem Yannick Noah, researcher at The University of Liège. Then the first question, It's compared to that that we did to that maker. Clearly, there is a conflict of interest of use before same the filming of the project. Between the first and second parthe east clearly that you Have already Tried to engage the different means conciliation, otherwise harmonization, to find out if. But seemingly, finally, which east your plan concrete for put end to that who east actually and who Mind? Has you hear speakone Includes that the Republic the population eyes then that the project east already developed and that the conflict east real. It's clearly in war and you Have wrong. There are means possession seemingly it not walking step. Which east the plan concrete for power you in go out? And Finally. The second question It's me who have at me. Those who Know Know that since 97, there are nothing at all that we saw. And then he n'y has nothing of serious. Therefore people initiatives for come be heard, it wants say some thing. I n'ai never summer consulted. Me I call the Promoters commissions, presidents. I 'll say same if it is not not easy to give figures. By example, the 600 million for Camps Illicit. One precisionand It's clear. All to time, you Have spoken of the Stock Exchange. You Have also

spoken of the 170 million of dollars. But for everything that who Concerns the envelope Related at mechanism social I'm Have spoken the. The power plant east all it. But which east the sign that it east? Which east this forecast in Terms figures that Concern. All that mechanism goes to go In the meaning of the development social. We have printing that he n'y has not. He n'y a step one other vision of the future. There are intentions. We Have heard speak from. But east that that in Terms of production, we can have also films compared to those fact? Dimension. I'm fine in the Solo Garden. Thank you for have me associate at that point of press. My first question. Initially the charges of the daily. I have said that you Have taken in hostage all the project Because that you not have it step justified by the fear in the search for the beginning until The end. Twelve some dead in back Justify the sale boat formats. Not the fact that you Have reduced 7% shares. The idea of a body for listen. And my third question It's that to know. Because that you you Feel Referred or? It's what your work? Have you reserved one further to your Detractors? After success? That Say you to the population of measurements Social to lower the population? The almost as much that the technology. When I See all those who are Volunteers. Then me I have aftercare hunters and Right now I left look for the pleasure of life Social and politics. But that is not step he who advance my question. It's at intention the concept of stability Social that you Have Mentioned everything to the time to know that that I Wanted do but from. What are the actions that you Have Eliminated? Me Seemed be in link to the logic of exploitation than resolve the trouble some Communities Local. You Have city possession of the dam, rehabilitation some way railway and the rehabilitation axes Road Important, but unfortunately at the entrance some region. East that that you not Find step that those actions of the police at the logic from exploitation some resource the problem some Communities local that are access at water in Destroying by example some Trail the way of water and Other utilities in homes, et cetera. The. Religion. Hello to all. This stay in As long as journalist. I 'll deposit one alone wound at term from that first match. There you go that who. By. By. Justice. The stay of four month. Namely I do not Know not how you Have spoken from. He had introduced those documents in 19. sometimes tax them in relation to the contribution to the theology. Has said for more than eight month and who to fifteen Years? Morning I have said that he n'y had no problem. What for all those delays that you Have conceded seriously to the forces Scientific? Instruments in due and due shape with regard to missions. Jointly. I'm on Snowmobiles. Add divisions. I have two short questions. First of all I am Entered in the room. I Would quickly know the meaning of Advanced. It has Oh, really attracted my Careful. And then secondly, you we Talk. One east aware of Minerals that we fate. One sees on your. There one sees one woman and then one sees things. There one Comes the To see. Concretely, It's like if the child not can speak of life instead of term. Swinging children. There you go it is called the idea from occupation. Thank you. It's at course from this first series questions. Translated in French by the plural some Texts Old. He n'y has no meaning Particular Based on the agreement free exchange and equally. I Think that we can be also than a illusion optics. But the image that you Have there, It's step one reason valid for those who Speak some Libya, it It's one English, therefore that represents currently also. But Right now on the side who in Poland? And it, that are plans that are seated on that folder. That is not step one prison It's well migrants, the first to have the right to die, the right to To work, not rights Mining. You Have the Large Theories. You Have the little ones permit of exploitation and you Have equally the permit from lodge in the most Involved in that kind of thing. Therefore one goes in the right meaning for quickly also return compared to those things there. When I Want you inform, Mr. legislator that actually, if I dare say, Peter Pan n has step Contacted. By the way I he Have envoy the patient today for power answer at all those Questions. I was waiting for me to more clarification questions from your part Because that he has me informed that he you had envoy one letter. That's it, the society has ordered an accurate portrait of Georges Papandreou in his office and has Clarified on its intention at intention questions and not only enlargement. But we Have equally requested that you Can constitute one teamsome Journalists some Researchers and NGOs to return on the website To to have access to more light and clarification in our Calls at course of the calendar. One team from Karachi until that day. I don't See step What for this team whose same today one Spoke. Therefore we Have foreseen from power

communicate by Journalists who Will himself return on the website Because than we Want one time for all and that people Can have access the news Reliable on the site. That will not be therefore step responsible. He is simply, like I the ai said, one meeting in my office with the director some platform. We have Answered at those Questions. One alone question that he a envoy one he has said complete of time for power exchange documentation. But east that that you Can come directly on the site? Yes, but There you go one team some diplomacy goes you contact until that day. Same if you are Elegant, hair long and either, either said in passer-by that we Like raise loads, a lot of things to the social. Otherwise, we do everything for the No one. In fact, there is the mix of the investor who Comes invest and who Comes profit is not that no pension? And who has hope from. Count and so on and very often It's like those Questions. Boats or deposit in one room of class. Can be a small percentage of the essentials some trouble Posed. Everyone does Money and No one not goes take the time to. It's it the. Since the Other media himself are allied the Journalists. Therefore when one said that you are a Geneval Think than the experts Have had some Echoes at intention some Donors. But one thing that we either arrived at one layoff date with a other expert does not Tell never it. For those Calculations Too much Difficult financially, we wanted to give syrup maple in Saying There you go that that it goes you allow to take if it not Has no permit of research Private until very weak majority n has step knows Right now that he Has one permit research on the permit research, since the permit of research or the Research Can ensue at the end of 50 Years n has nothing at To see. Therefore one does not bind not on the issues of responsibility Social, but in the future. At this question, there is one nuance that we Do on the case, not on his responsibility in the action Social and the responsibility Societal. It does not product not the weight some responsibility Social, same if It's one liberality at level some resources. Therefore advice administration can decide from this tax on the community. It's Oh, really all that who east it. And they are Organized and they Have some Offices, experts who take care of from it. And It's for it than we Have said as part of exactly from this responsibility not Societal, Social, therefore one liberality of the Board administration some reserve. They Have insider ten month of work for demining the area. For the moment, we did not take much credit. One a supported the community management. Otherwise, during one yearhe Was more than 500 for one handful bosses, It's one question of pleasure. Therefore one east gone in Tunisia with a payment daily for their allow to have a small bridge daily and therefore from To work on that project. Right now, if you Must return tomorrow In the Terms some law local and prime charges for have a lot of wagering load in work in his procedure if we are Notified. The company that puts itself in place knows than we Must Right now initiate discussions. But initially, can not to continue, that is not not the sorrow. The certificate of exploitation who east obtained after payment rights on the file after have transmitted 10% to the State Congolese. And after it Will one strategy of commencement of work. There are all one mechanics prior whose the Optimistic we Had fact believe. You Come on initiate discussions with the community local. It goes go through the governor who goes give its opinion. And youthe king Philippe, the cadastre mining? He goes ensure that there is not either not to with the minister some Mines, Business Socialone By the way step spoken of the system. Is not that not discussions on the issue of fields and that who east Remained at be stake in work especially? At less, it is organized, it goes again, et cetera And complaints Have summer Issued and Committees are in being put in place. The code mining goes challenge a deviation Left by the Communities Local. First of all, you Have said these are the countries, that that we Call royalties. Hear therefore the royalty mine, whose the Proportion from distribution already in the need is there. And there is was Indicated by the It's for the development infrastructure, the grip in load of the community local. But in more, in the reform of 2018, on a Added the question of the burdens of zero 3% compared to fourth or I was before. We Have introduced that field in the councils. We have when same one involvement and one experiment funds that the society civilian wanted to do for he. Therefore, there is a second. But therethe development infrastructure, It's the Other Large Infrastructure. I don't Think step than the road rehabilitate the way railway who east the Medium the less expensive. I don't Think that those Infrastructure there not Will step serve the population of. Finallymust create a new network of transport already. I you has said you Have how to get there? To

the limit, you Can To see surprises or some Pisces who Come in Burundi which Comes from your countries in this region with Lake Tanganyika, et cetera Therefore develop infrastructure and Profitable Because that those Infrastructure do not belong not in Brazzaville or at others like those infrastructure, we said at term from projects or in part at the State. We are there since fifteen Years at the service of the State French, but one alone fashion east financed against those. And then that's it, we installs in a conflict to the community from Mali Because that henceforth they Will power go out their produce. They Will power have one quality of life in term from development social Because that they Have the Ideas for a nothing. But they Arrive like a man who has summer prevented from lead and Hotelsone stadium, et cetera and people don't Will leave the Events that I Put in. Really? Bah people Will leave, we n has step of elements, no room of meeting. You help to train there low and youths Come from Colombiafrom Tanzania. They Come in a same studio in the development for you bring to the time one job or others activitiesand so forth Therefore if it Pass quickly, It's in a completely interesting at To see and It's What for one upright in a project. He n'y a point of development from value for Central Electrical, unity from treatment of waterand so forth but equally of a zone economical Special for Acts assets. For a penny Dealing with, I have one contract with others, like I'm under Treating for me put in the area economical Special. Therefore I have ten Years, is not that step? Not to power pay the whole some taxesand so forth Therefore It's one request of the police. Therefore that who east fact, it Creates one development long term who goes do townhimself Develops. Constructions are done and before latest news after departure, whereas looting, there is had more than 300,000 persons, but today It's less 200,000 persons. Therefore the project goes Oh, really help the community. And the question of the specifications goes power return. In his time, like I had explained! 'Il quickly move on to the last question and the Other from intervene. Even Vietnam us said that he do not that he y Has one premium to benefits

[01:24:51] in relation to this practice. Civil society is embarking on abstraction in order not to resist the projects initiated. I still haven't understood, but I mean, I think. Tensions between parties. In this kind of funding. It is the term of a software for all contracts. This is unprecedented. Indeed, it is a contract. They have provided for the possibility and the person has never been solicited by the mechanism such as the one who comes to finance the project, nor the one who comes to do the activities. That's how many partners you're going to have in the partnership. It is written in black and white. All Carlos has done and it is an even greater involvement. Do you know that in the board of directors

[01:25:51] of De grandir and member of the board of directors, it is a group of people appointed by the board of directors. Are members of the board of directors and report produced filed with the commercial court. Being that they have made decisions either related to the feasibility study, or it is related to the development of the project for oneself. What does the funding mechanism say? So there is no more hostage-taking. The notion of the majority should not be understood in the sense of such a majority because it has been given a mandate. It is a five-year project. They made loads for me. We are 25 years old, we present research for. More importantly, I do not know if you read that right. The first had sent someone, a geologist who was present at each sample taken. And for the drilling work, this representative of nothing was present and not minutes of trial, et cetera. We thought we existed to be able to announce this. Again now it's related to the concept of selling. I heard that. The last time when the thing quickly made its intervention at 1.3. The first who said the concept of slaughter, that is to say border, a presidential institution. For him, the show offered to the ten. At the level of the draft agreement that he had in mind at the level of watering and hygiene, bleached by. Second element of the hygiene report, hygiene has established that the sanitized session has not been regular and one cannot be up to what had to be done. be given. More than \$ 160 million . And that's why the Dr. said yes, there is a plan B in its preparation. Same thing. The company said that no, there was a sell-off and drew on the fact that we are poisoned, become a magician with an

evil power that every night has to pay. The general manager of the mining group to make a sale. The 10% of women of 15% and make a transfer of 5% while the traditional practice is that before there was a blocking handle who wanted talks to file the feasibility study itself leaving waiting for useful details. In fact, and all for that. Wait until we are not at the feasibility studies, it comes back and tomorrow, he will have access to all. So, again, you and another journalist that we have, you are the only ones to inform you, create a 5% session. We are not aware of the company. It was a taboo, is not aware. It happens like that, it never happens on the street, it happens in the office. Was there a cabinet that approved that? There is a whole mechanism that must be able to happen. So then reverse your expression to find out who brandished the plates of the state. But if he has none, it is hardly mentioned. It is in the process of the, the one that is even in the heart of the conflict. We learn that the expression of 5%, there is a section of 15%. Go read the syndicated assignment contract. the State says I authorize the transfer to Vigile and there is a totally convoluted dimension to Article 10 to 2. I am told that our parents have made the transfer not shares since we are in the company. We want the transfer of shares. To Jean-Michel. So will appear. Isn't this what we call the penis of this completely foreign family whose government has never given Kinshasa permission to provoke these victims who do not exist and who? It is a document in the public domain that completely involves a company. So I can say that it is December 15, at the time of Chinese law, we say I lead directly with two different legal companies. It is a theme here. I want me to close the transaction with the parent company. And then, there are other companies that will come back to pass, which come from the shareholding of which this is what has been done. We are not Wakayama. So to this day, it is simply considered that the rights of the president are acquired. La, that's his. But the goal is not to get into this conflict. Again, I insist, we must separate the mining rights. The project as it has been. Today, we came to see who the project will have more than \$500 million available. And to go back to the one who normally asked questions, we had planned an initial investment of activities in gas, mining, infrastructure, industries at more than \$545 million. And in the second phase, so domestic investment, one of transformation, we went from \$115 million. We went through 1.1 billion for 300, but it is very interesting because we have to talk about stock market law. Otherwise after telling you stories, we need to talk, speculate. Well, we do fundraising, we make financial profits. They are serious people, they are people. It's not smart people in the international community. We arrived after more than 18 years, we saw policy projects, and so on we see on the international market to present a project. People who do early 2015, they do surveys and just before the start of the project. The project was at \$5 billion before it even started. And it's not. You have to be serious in the management team at the level of the reference council. Did you say? You lost. You have all that. We can give you their identity or make them move, who will be able to check if the world is small. Today, it is impossible to say what you said. Why do people turn into research heroes before they can even launch the project? 4 billion human beings. But it is unlikely not to have billions given to the earth. But stop saying no and are we going to pass on to the population of tomorrow? Are we not simply having the leadership role to set aside abroad? In the public market, I was told it was good to say the statistics of the children, you must have access to information that allows you to understand. It is neither the vast majority of users, nor a sharing have invented anything. Belong to the state, the numbers. We fought to be able to and there are funds that are available. We fought to be able to lead an innovative idea for the first time, the Congolese state to develop a project, we build infrastructure and the demand of these people whose government was said to be the government, the envoys having to question do you know their fate? There are people who invent incredible things of tomorrow. But it's still not Quebec, it's nothing.

[01: 34:12] It is a separate society from Buenos Aires, in a state mailbox, but it is still a point of stage of realization, while we lack the means to prepare our projects. And in terms of social

figures, it is to be very, very conservative and cautious because, as has been said, the discussions will take place in peace. There are factual experiences, previous techniques to manipulate others and it is linked by project, by project and difficulties. But today, we are worried, fearing in the project that was presented by the reserve, it is that for the first time in an interdependence without, it can not be controlled. It is a power of control, even by all the other companies, whether it is the special economic zone, whether it is okay and the processing units. which produce the experience in the DRC of the units of this effect. The promoter was not aware of the mechanics of the launch success and all the mechanics on electric cars that allows us to fully benefit. For the first time, we have investors who are a little principled and who come over two years and we are accompanied. Typing you on Google goes as if you think so, we will be entitled to it in my approach. In the meantime, we need special economic creativity activating others because the state will come to the population before asking for money. But we must be able to draw all the thoughts from it. So allow these or are we ahead of the curve? If we can integrate those who are at the source, there are some who are financiers, they make people smile, they are tired of taxes, and so on both develop the stock, but we can go further. So yes, I know, it's a pamphlet that was presented to you? We will say everything that can be blamed on the project of one of those who are human beings. I know you can't blame yourself, it's being a speculator. What you don't know much about? Mining? Come on, we don't ask banks. The plaintiffs are speculators. How did they manage to raise \$4 billion before the CAP project started? And what do we call in the building industry? Why did he join them? And they are now among the real majority shareholders of the company and. We use technical terms of the law by saying that when we need to go in the direction of its parameters, it is just like in everyone, people who are not regulars, insiders. I don't think there's a platform that we're hurting. They do not see that these taxes and in that time, it is the Congolese people, it is the Congolese state. But it does not make a majority of them last. Isn't his percent quota today? And people have made the measurement, everyone knows it to keep it. But good God, what's going on? You are the first ones who should plant in the kitchen. But why

[01:37:32] is the President of Zimbabwe joining him? It is said, from 300 billion recorded because you have completely thanked him and will not go here to \$ 7.52 dying and to the license here to that of Pont L'abbé, put on leave platform a short time ago. Gazprom owns the license, but a small payout program of more than \$2 billion knew the boomerang effect of its success. To have spoken for good. Go read the report by the end of the year without needing to talk about those millions of dollars. So we are telling facts and we have allowed ourselves today to be able to speak because as members of the government, it is not we who have done much. They say there is a cheese, billionaires. For a boss, this is not correct and say it for given many exchanges. So don't take this, but here it's Gobinière. So do not take terms that are part of it and that seek to deny the door of prosecution. Radio silence. But stop, we're missing out on a science. And the people who are going to do what? They will integrate us into the African market and will leave. You know, this project, you have more than two months of time to spread the factory in Zambia and bring it into the world. Read yourself, go see what happens, so we let pass pitiful opportunities whatever the mechanics or the way we do it, it is to get to pass the first license and make a celebration. Goodbye because those who do not know how to deposit it more along the mining concession do not belong to the same patient as one belongs to the Congolese state. the Congolese state counting only fingers and fingers. There are also,

[01:39:28] I think, you asked if today in Manaus there is

[01:39:31] of the diamond. It doesn't belong to the billions, but if he had been, is what he proposed to come and go and see the work we've done. Then again, you can take it from yourself.

At the beginning of 2010, in the midst of the mining crisis, demand was excellent. Copies, there are no details. Follow my gaze.

[01:39:58] As he was born from the ashes of some. But there was no, no connection with us at the time. We really thought, we went in June, we were already, we had not even said it's not yes, you do not have time, we start, we take steps and later, investigations. What will we finally find? A feasibility study? A feasibility study because. We will find a study of. The transformation of the state of society into society will never wait for the level of authorization. The fact of having a departure from which we understand why it is excluded voted because we will find out elsewhere if we have made investigations. But to launch this, all he did not understand is that for the briefing, we trust His Excellency Mr. President. He is a Christian. We have heart. Where there is the truth, there is always an ounce of truth and she will repent in one way or another. This project is one of the most ambitious projects in the state. We all cried a lot for the other soldiers, the police, the batteries and so we have in hand. But this is not our next step, our generation. These are the issues on which we must move quickly. But conflicts have been going on for more than ten years, there are still conflicts in the departments of agricultural areas, et cetera. . But here, today, then no longer possible, it is the project itself. This is where we do not develop debates at 23 billion. People say the decision, the feasibility of this project, how we develop, how we do it, et cetera And every year, we have cut out of this project. Nothing. So these are the elements of colonization to admit that we cannot give figures. But a more important element, it is more than 5 billion already planned. We had the idea to imagine our social security coverage for the project. We said if you have the special economic zone, a company that enters the special economic zone, we will invite them to be able to give X annually there for the community of. So if I called on July 30 the mining royalty, if I have the benefit at the level of the specifications.
